TITLE:

FINAL REPORT ON EXPLORATION ACTIVITIES  
EXPLORATION LICENCES 7344 & 7345  
REYNOLDS RANGE  
30/5/91 TO 15/3/93

AUTHOR:

L.A. Price

DATE:

10 May, 1993

## SUMMARY

Reynolds Range Exploration Licences 7344 and 7345 were granted to Poseidon Gold Limited on the 5/4/91 and 1/5/91 respectively.

The licence areas were applied for to target structurally controlled lead, zinc, copper, silver and gold within the Lower to Mid Proterozoic metamorphosed units of the Arunta Orogenic Domain.

Exploration within the tenements has included regional reconnaissance stream sediment sampling and rock chip sampling.

The initial sampling did not highlight targets which required follow up.

The tenements were relinquished on 15 March 1993.

## **1. INTRODUCTION**

The Reynolds Range Exploration Licences 7344 and 7345 cover an area of 308 blocks (approximately 992 square km). The Exploration Licences were granted to Poseidon Gold Limited for a period of six years on the 5/4/91 and 1/5/91 respectively.

The licence area was applied for to target structurally controlled lead, zinc, copper, silver and gold within Lower to Mid Proterozoic metamorphosed units of the Arunta Orogenic Domain.

On the 15 March 1993 the tenements were surrendered.

## **2. CONCLUSIONS & RECOMMENDATIONS**

### **Conclusions**

Reconnaissance sampling of EL's 7344 and 7345 did not produce targets which required follow up.

### **Recommendations**

Relinquishment of EL's 7344 and 7345.

## **3. LOCATION AND ACCESS**

The Reynolds Range Exploration Licences 7344 and 7345 are located on the Napperby (SF53-9) 1:250 000 map sheet. The tenements cover an area of 992 sq km to the west of Aileron, approximately 135 km north of Alice Springs. (Figure 1). They are located over the pastoral leases of Napperby, Pine Hill and Aileron.

Access is via the Stuart Highway to Aileron and then via the unsealed Coniston Station road. Station tracks and the Amadeus - Darwin gas pipeline give some access to the tenements. The topography is generally rugged and away from the tracks access is best achieved by foot or helicopter.

## **4. PHYSIOGRAPHY**

The physiography and erosion history of central Australia including the Reynolds Range is described in Mabbutt (1967).

The tenements are dominated by the south east striking Reynolds Range above the alluvial plains. Drainages in the region are perennial.

Vegetation consists of spinifex, shrubs(cassia) and low trees(mallee, acacia) with isolated ghost gums, river red gums and tea tree along water courses.

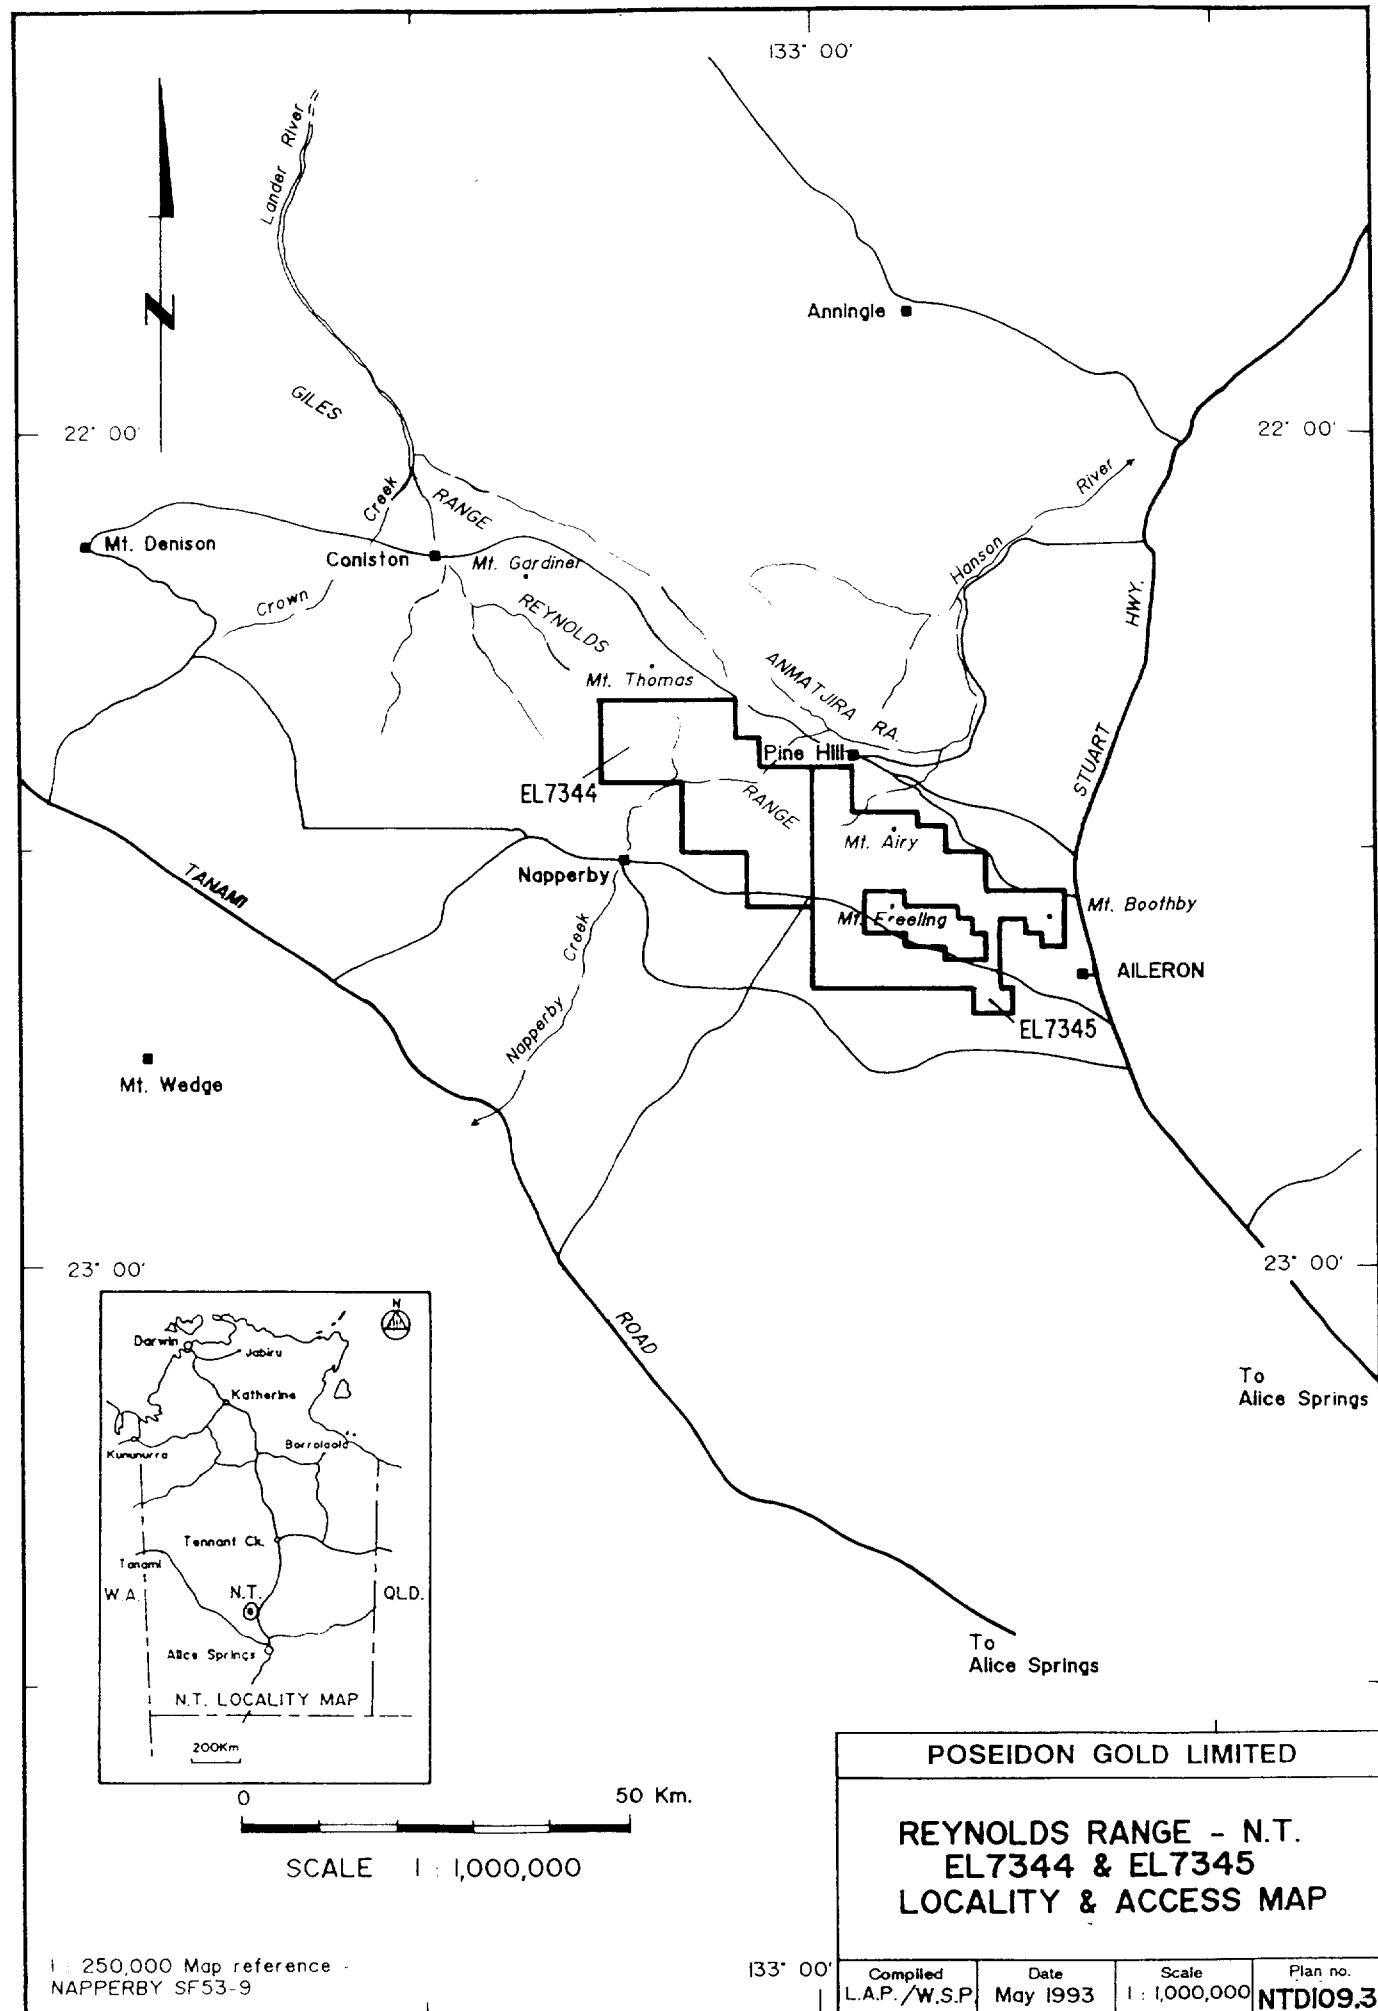

Fig 1

## **5. GEOLOGY**

### **5.1 Regional and Tenement Geology**

The tenements lie in the north western portion of the Early to Mid Proterozoic Arunta Orogenic Domain in the Northern Territory.

The Arunta Orogenic Domain comprises metamorphosed sedimentary and igneous rocks which have been extensively intruded by a range of granite bodies. The Granites-Tanami and Tennant Creek Inliers are located to the northwest and north, respectively. On all other sides, the Arunta Orogenic Domain is surrounded by, and forms basement to, younger Late Proterozoic to Mid Palaeozoic sedimentary basins.

The tenements cover the Central and Northern Tectonic Zones of the Arunta Orogenic Domain and contain generally amphibolite grade Division 1, 2 and 3 lithologies in addition to the range of granite intrusives.

Within the project area, the rocks within the Orogenic Domain have been divided into 3 groups:

Division 1: Aileron Metamorphics:	Felsic and mafic granulites
Division 2: Mt Freeling Schist:	Muscovite-biotite schist, quartz-rich metasediment, sillimanite schist.
Wickstead Creek Beds:	Calc-silicate rock, marble, gneiss, schist
Lander Rock Beds: (LRB)	Schistose pelitic metasediments and quartz-feldspathic gneisses
Division 3: Reynolds Range Group:	Schistose pelitic metasediments, meta- quartzite and dolomite.

The divisions are separated by unconformities. The increasing maturity of the sediments reflects the evolution of the basin.

## **6. CURRENT EXPLORATION PROGRAMME**

Prior to exploration commencing, records of the Aboriginal Areas Protection Authority were inspected and site details recorded. Sampling programmes were planned to ensure they did not encroach upon any recorded sites.

## 6.1 Stream Sediment Sampling

Regional reconnaissance stream sediment samples (161) were collected within EL 7344 and EL 7345. The samples were collected on an average density of 1 per 2.0 km<sup>2</sup>. At each site a -6mm +1mm was collected for base metal and pathfinder element analysis with a 2kg -1mm sample (136) taken for BLEG analysis at selected locations. Sample locations are shown on Plan No's NTD 228 and NTD 229.

The samples were analysed by Classic Laboratories in Darwin. They were pulverized in a chrome free bowl, subjected to an aqua regia digest and analysed by the following techniques:

ICPOES (IC2): Ag, As, Bi, Cd, Co, Cr, Cu, Fe, Mn, Mo, Ni, Pb, P, Sb, V, Zn

XRF: Ba, U, W

BLEG: Au

Samples types are listed in Appendix 1 and results are available in Appendix 2.

The stream sediment sampling did not highlight any areas requiring follow up. No further work is recommended.

## 6.2 Rock Chip Sampling

Rock chip samples (14) were collected in conjunction with the stream sediment sampling where outcrops of interest were observed.

The samples were analysed by Classic Laboratories in Darwin. They were crushed, pulverized and subject to an aqua regia digest prior to analysis by the following techniques:

AAS (9S): Au, Ag, Cd

ICPOES (IC2): As, Bi, Co, Cr, Cu, Fe, Mn, Mo, Ni, Pb, P, Sb, V, Zn

XRF: U, Ba, W

(1991 Sampling : Sample No's D5000's)

ICPOES (IC3): Ag, As, Bi, Ca, Cd, Ce, Co, Cr, Cu, Fe, K, La, Mg, Mn, Mo, Na, Nb, Ni, P, Pb, Sb, Sn, Sr, Ti, V, Y, Zn, Zr, Ba, U, W

(1992 Sampling : Sample No's D8000's)

Sample locations are available on NTD 228 and NTD 229 and results are available in Appendix 3. The rock chip sampling did not highlight any areas requiring follow up. No further work is recommended.
