INTRODUCTION

Exploration Licence 3044 was granted on 27th October, 1981 and surrender of the licence became effective on the 25th May, 1982.

The EL was applied for on the basis of its stratigraphic and structural relationship to the Manton area, which was subjected to an intensive exploration programme during 1981 within Mining Reserve 771. The results of this programme were negative, and hence no exploration activity was carried out within the EL.

LOCATION

EL 3044 was located in the Daly Range area, some 5 kilometres south-east of Manton Dam, situated between the Stuart Highway and the Adelaide River.

The EL was located on the Noonamah 1:100,000 sheet 8/5 and the Darwin 1:250,000 sheet SD52-4.

SUMMARY

The area was applied for to protect potential strike extensions of any significant mineralisation that may have been discovered within the Manton area of MR 771. Since the exploration in the Manton area gave negative results, no field work was carried out within the EL (Ruddock, 1982a, 1982b).

CONCLUSIONS

Due to negative results in the nearby Manton area of MR 771, it was decided not to extend the exploration activity into EL 3044.

RECOMMENDATIONS

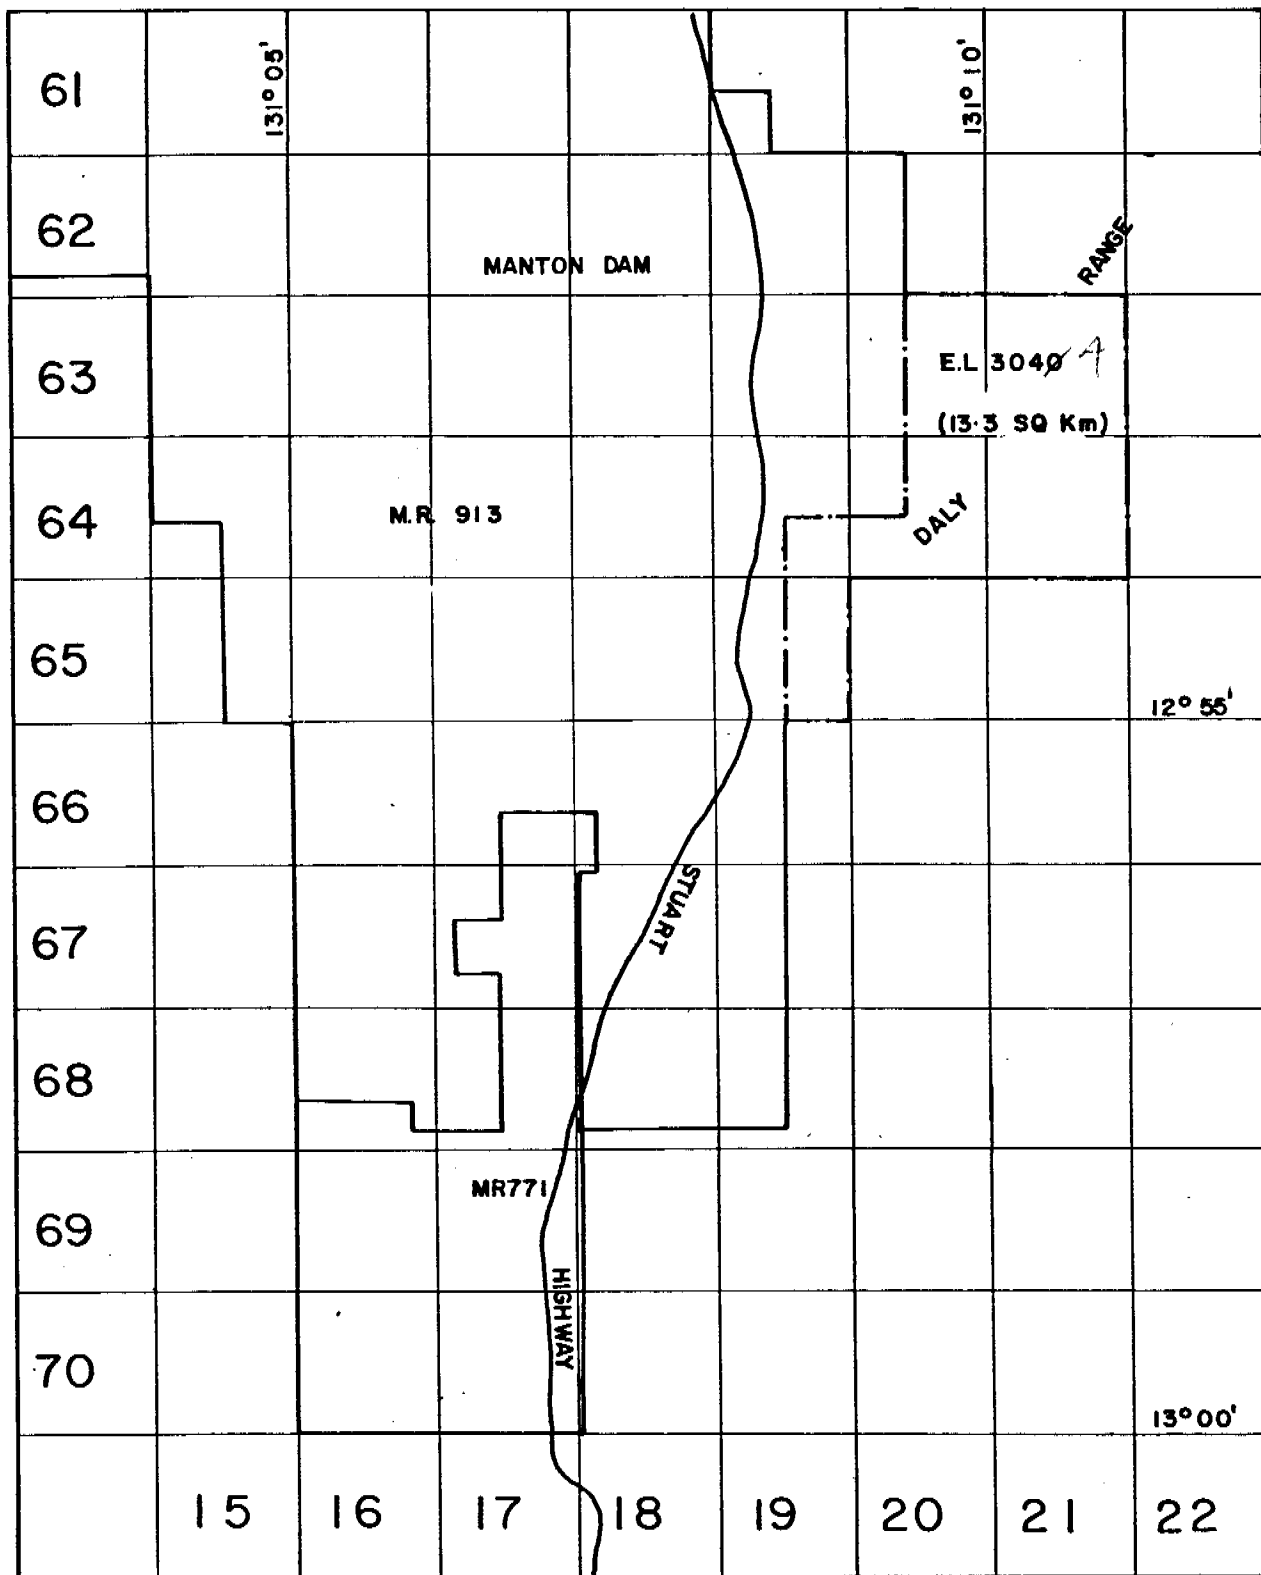

That the EL be surrendered.

WORK AND EXPENDITURE

No field work was carried out within the EL, and hence no expenditure, apart from the cost of the EL application and the final report, was incurred.
