1. **SUMMARY**

There has been no field work carried out over the area of Exploration Licence No. 3142 to be relinquished.

Office work consisted of reviewing the data from previous government regional geological surveys (Tobermory and Hay River 1:250,000 geological series, "Adam Special" 1:100,000 geological map, Georgina Basin 1:500,000 geological map) and company reports of previous exploration in the environs of the licence.

From the above research it was concluded that there was minimal possibility of locating significant metalliferous deposits in the units covered by the areas relinquished. There is, in addition, a general lack of suitable structures.
2. TENEMENT STATUS

E.L. 3142, with an initial area of 899 square km., was granted to Agip Australia Pty. Ltd., on 9th November, 1981. Its location is shown on Figure 1.

In accordance with section 26 of the Mining Act, 1980, the area has been reduced by 450 square km., more or less, for the third year's continuance of the licence.

The area which has been relinquished and is the subject of this report is shown on Figure 2.
