TITLE: SECOND ANNUAL REPORT FOR EXPLORATION LICENCE 8774
FOR THE PERIOD 16/9/95 TO 15/9/96, TENNANT CREEK
DISTRICT, NORTHERN TERRITORY, STRADDLE PROSPECT
AUTHOR: DR PHILIPPE O.J. MOUCHET
DATE: OCTOBER 1996

1 SUMMARY

EL 8774 (Straddle) was granted on 16/9/94 for a period of three (3) years. It consists of two graticular blocks (6.5km^2) and is located approximately 45km north of Tennant Creek township. PosGold is exploring the licence for Au/Cu/Bi ironstone mineralisation. This report details the work completed by PosGold during the second year of tenure.

Work completed over EL 8774 during year two of tenure includes a RAB drilling programme.

2 INTRODUCTION

2.1 Location and Access

EL 8774 (Straddle) is located approximately 45km north of Tennant Creek township and is traversed by the Stuart Highway (Refer Figure 1). Access is gained via the Stuart Highway, hence along the Phillip Creek Station track.

2.2 Climate and Physiography

The climate of the Tennant Creek district is mild to warm and dry throughout autumn, winter and spring with cool to cold winds in winter. High temperatures (in excess of 35°C) occur in summer with associated seasonal rainfall which can impede field work programmes.

The physiography of EL 8774 is characterised by a flat aeolian and alluvial sand cover with a gentle easterly slope. The Phillip Creek meanders through the licence. Gentle hills of the Short Range are found north of the licence.

2.3 Tenure

EL 8774 (Straddle) was granted to PosGold on 16/9/94 for a period of three (3) years. It consists of two (2) graticular blocks covering 6.5 km².

2.4 Previous Exploration

During 1992-1994, Western Mining Corporation Ltd with Giants Reef Mining as a joint venture partner explored the area covered by EL 8774 (Straddle) under EL 7716 (Phillip Creek).

The joint venture parties conducted an aeromagnetic survey and a sub-regional gravity survey (Ward, 1994).

Reconnaissance work over EL 8774 was carried out by PosGold during 1994-95. This included an aborted vacuum drilling programme (Mouchet, 1995).

3 REGIONAL GEOLOGY

The Tennant Creek Inlier comprises gneissic basement successively overlain by unconformable Proterozoic sediments of the Warramunga Group, Hatches Creek Group and Tomkinson Creek Beds. These sediments have been intruded by Proterozoic aged granites, and subsequently overlain by Cambrian sediments (Le Messurier et al, 1990). The Warramunga Group contains all of the economically viable mineral deposits in the Tennant Creek region.

The Warramunga Group is overlain by the Flynn Sub-Group. The Warramunga Group comprises a sequence of argillaceous sedimentary rocks including siliceous greywacke, siltstone, shale and haematite shale with zones of disseminated haematite-magnetite being common throughout. Quartz-feldspar porphyry lenses occur as both cross-cutting and conformable units within the sedimentary sequences. The Flynn Sub-Group comprises a sequence of argillaceous to quartz-rich arenaceous sedimentary rocks, coarser up sequence, with abundant quartz veining.

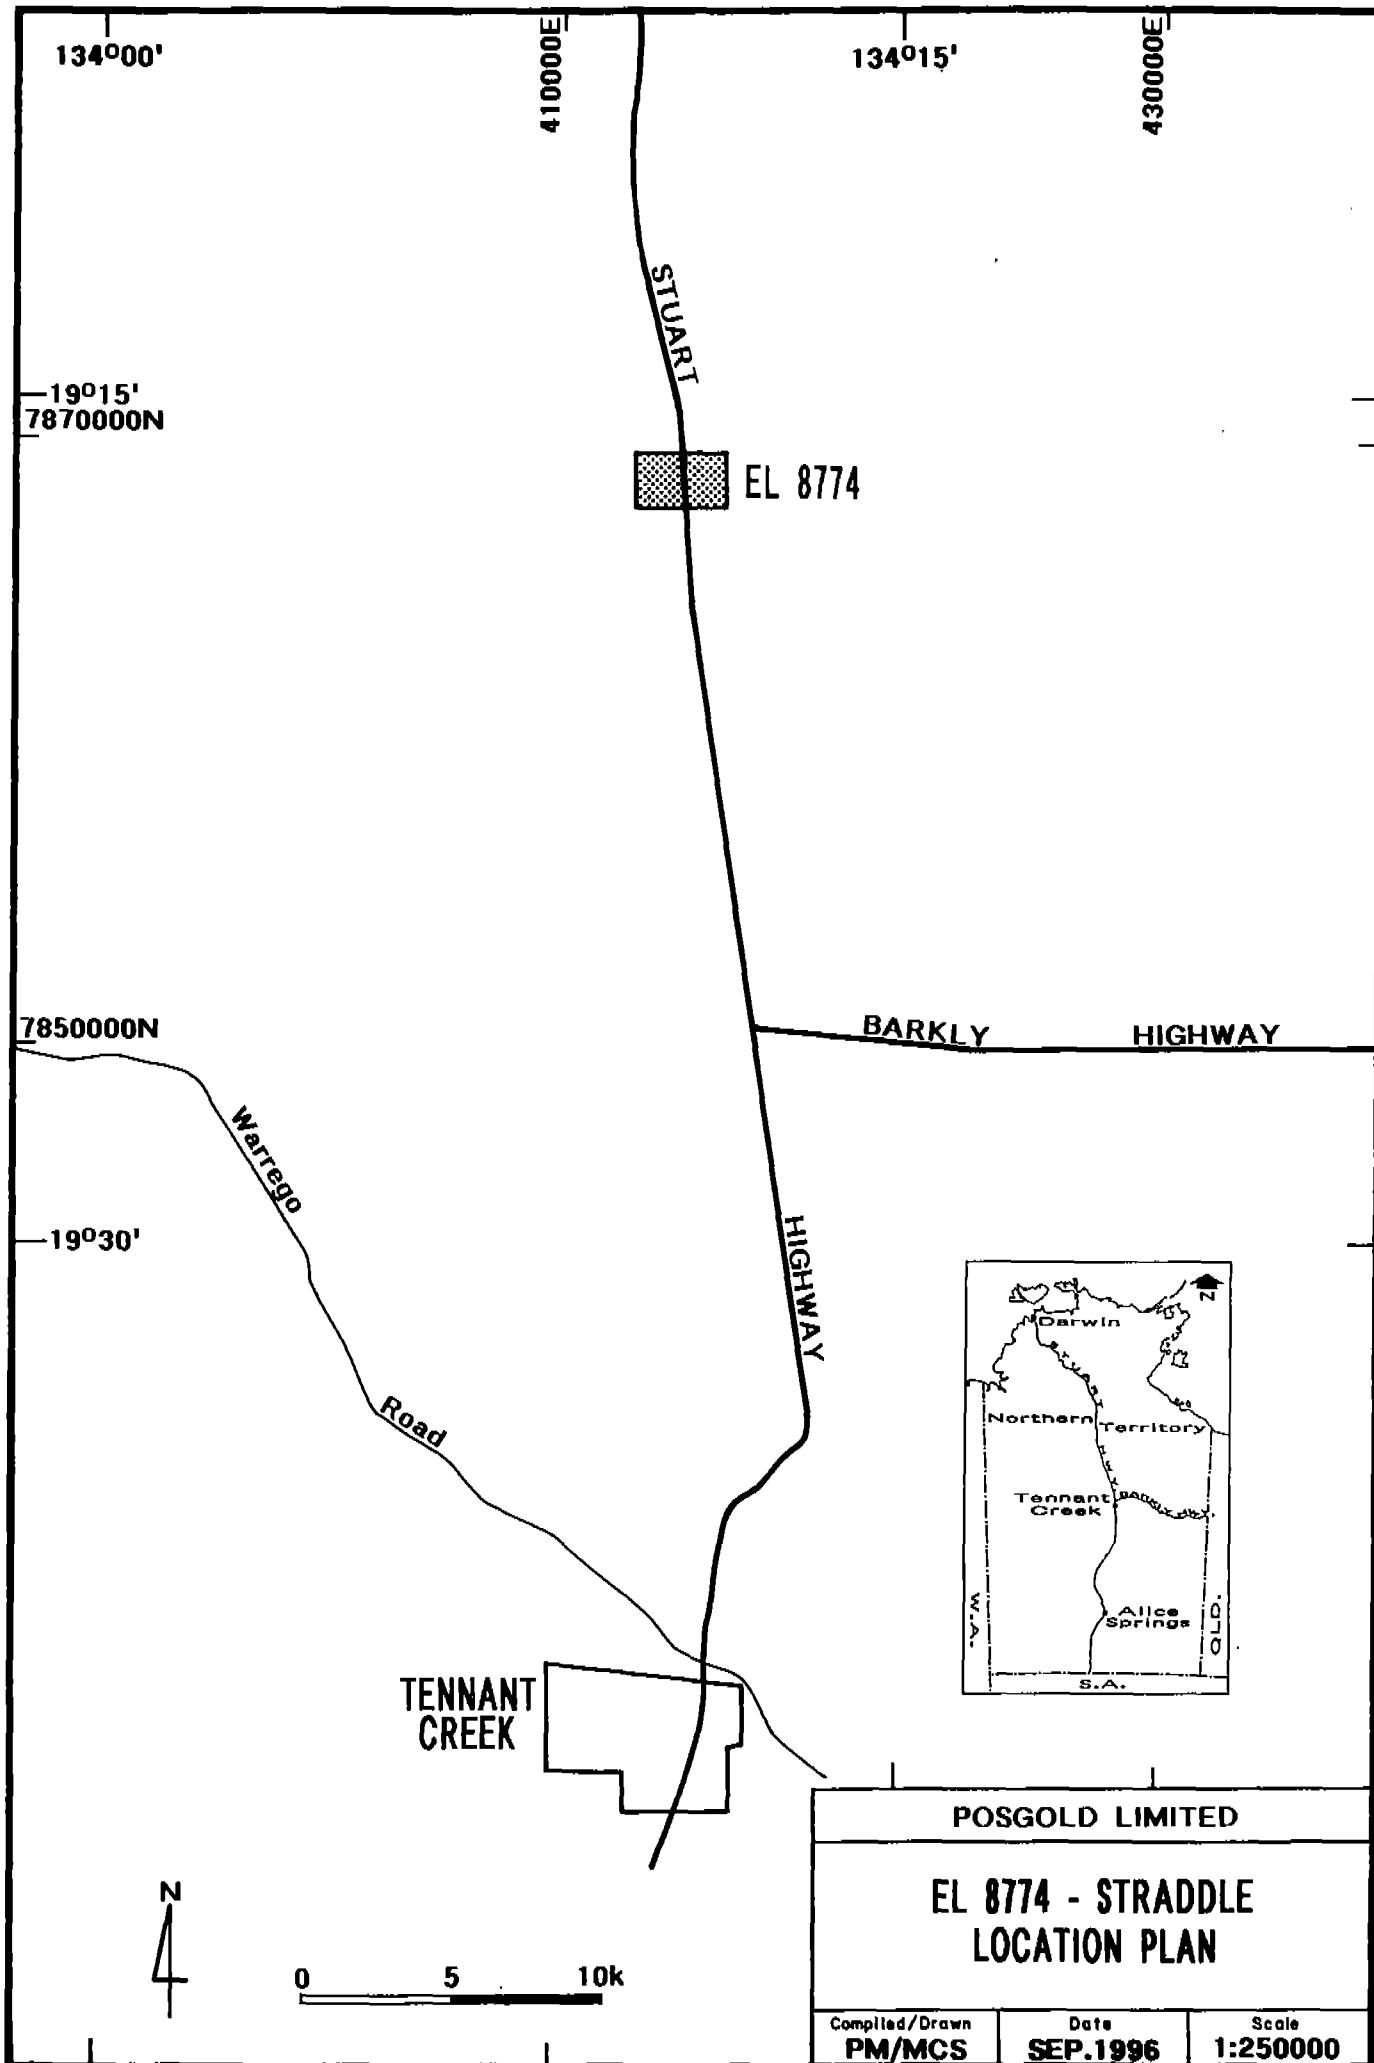

Figure No. 1

The Warramunga Group exhibits three deformational phases and is metamorphosed to greenschist facies. The first deformational episode results in tight to isoclinal, upright folds with east-west axes. Two later episodes of faulting consist of WNW trending faults and shear zones with south-side-up movement, and NW trending faults often filled with quartz, showing sinistral movement.

4 LOCAL GEOLOGY

EL 8774 contains no outcrop and is covered by aeolian and alluvial sands. The rocks are interpreted from the geology (geophysical and drilling data) to be interbedded siltstones and sandstones of the Warramunga Group and the Flynn Sub Group, intersected by a dolerite dyke.

5 EXPLORATION SUMMARY RESULTS (16/9/95 TO 15/9/96)

EL 8774 (Straddle) has been investigated by an exploration programme in its second year of tenure which has included a rotary air blast (RAB) drilling programme.

A total of 10 vertical holes in 3 fences (3300E, 3550E and 3800E; add 410000 for full AMG coordinates) were drilled. 3 metre composite samples were submitted to Assay Corp (Pine Creek) for assay on Au, Cu, Bi, Fe and Co. The bedrock lithologies are mainly represented by siltstones and in a few occasions by a dolerite. Refer Appendix 1 for the lithological legend and the complete RAB drilling data. Refer to Figures 2-11 for RAB drillhole locations, and cross sections (3300E, 3550E and 3800E) displaying the geology and geochemical assay results.

6 CONCLUSIONS AND RECOMMENDATIONS

Work over EL 8774 during the second year of tenure comprised a RAB drilling programme. Warramunga Group and mainly Flynn Subgroup sediments have been recognised through the drilling programme. The potential of the western block to host economic Au, Cu, Bi ironstone mineralisation hosted in Warramunga Group sediments is considered little. A ground magnetics survey in the eastern block followed-up by RC drilling is recommended to fully explore the potential of the licence to host economic mineralisation.

7 EXPENDITURE STATEMENT FOR THE PERIOD 16/9/95 TO 15/9/96

During the second year of tenure EL 8774 (Straddle) incurred an expenditure of \$16,813. A breakdown of the expenditure is detailed below:

EXPENSE	COST
Employee Costs	\$ 4,320
Overheads	\$ 956
Drilling	\$ 6,019
Assays	\$ 3,326
Operating Costs	\$ 1,527
Specialist Services	\$ 411
Tenement Costs	\$ 254
 TOTAL	 \$ 16,813

8 FUTURE EXPLORATION PROGRAMME AND EXPENDITURE

The proposed exploration programme for EL 8774 for the third year of tenure will focus on investigation of subtle magnetic anomalies in the remaining block of the licence. Exploration will include a ground magnetics survey to determine the possible source and depth of the magnetic feature possibly followed up by RC drilling if the results of the survey are encouraging.

A summary of the proposed expenditure is outlined below:

EXPENSE	COST
Employee Costs	\$ 2,500
Overheads	\$ 500
Drilling	\$ 5,500
Assays	\$ 1,000
Operating Costs	\$ 1,000
Specialist Services	\$ 1,000
Tenement Costs	\$ 50
<hr/>	
TOTAL	\$ 11,550

9 ENVIRONMENTAL AND REHABILITATION FACTORS

PosGold has commenced an active rehabilitation programme over much of the Tennant Creek field. This commitment has been reinforced within the Normandy Group with the appointment of a Group Environmental Engineer to oversee and implement the Group's guidelines and objectives. In addition to this an Environmental Superintendent has been engaged at Tennant Creek to design and implement the Group's objectives throughout the Tennant Creek area.

As an example of the Group's commitment to environmental issues several active rehabilitation programmes are currently being undertaken in the Tennant Creek field. These include programmes at Nobles Nob, Eldorado, White Devil and Warrego.

An Environmental Management Plan for the Company's Tennant Creek Operations (Fowler, 1993) has been submitted to the Department of Mines and Energy under separate cover (March 1993). This plan details the strategies to be implemented over various areas following completion of exploration programmes and mining operations.
