

23-08-2001

Attention: Principal Registrar

Dear Sir or Madam:

Statutory Report
Annual Report for
EL6566, 6903, and 6904 "Snake Creek"
for the Period 3rd June 2000 to 2nd June 2001
Northern Territory, Australia

Please find herewith the Annual Report No. 24545 by Rob Curtis, titled as above.

A copy of the Report in Adobe Acrobat format is enclosed, along with the files in their native format (mainly Microsoft Word, and MapInfo).

Expenditure is reported in Appendix 5.

Rehabilitation

Environmental disturbance was minimised during the bulk sampling operations by strict adherence to the Ashton Mining field policy.

The construction of new access tracks was carried out with the aid of a Samsung front-end-loader. This assisted in minimising the environmental impact by ensuring that vegetation was cleared blade-up to preserve grass, shrub, and topsoil cover and not create deep, permanent windrows. Detours were created to by-pass extensive areas of dense vegetation cover and large individual trees. All debris heaps were also flattened and dispersed and it is anticipated that rapid revegetation will be assisted by wet season conditions.

Following the excavation of the bulk samples the over-size gravel was re-distributed within each site in order to create a suitable trap for future sediment. The access cut that was made into the creek bank was also smoothed and re-filled where possible, and any existing debris piles were dispersed. The progress of natural revegetation is expected to be rapid due to the high volume of water carried by the streams during the wet season.

Yours truly,

Ian Hubbard
