

E22645

Planned Exploration Activity and Expenditure to 03/09/2004

Planned Exploration

Interpretation of magnetics and gravity data has identified structures and possible mafic intrusives beneath the Antrim basalts that represent targets for nickel sulphide mineralisation. Geophysical surveys including TEM and possibly gravity are proposed to test for Ni sulphide mineralisation within the sills with follow up drilling dependant on results of the ground geophysics.

E22645 Planned Expenditure to 03/09/2004

	\$
Geological Activities	3,000
Geochemical Activities	2,000
Geophysical Activities	15,000
Drilling	15,000
Environment Rehabilitation	2,000
Site Clearance	3,000
Tenement	3,000
Total Planned Expenditure	<u><u>43,000</u></u>
