EXPLORATION LICENCE 4562 ANNUAL REPORT FOR FIRST YEAR

23 SEPTEMBER, 1986 TO 22 SEPTEMBER, 1987

for F. Henry, N. Walker, E. Bailey, and J. Wright by Eupene Exploration

Enterprises, November 1987

Page 3

1 INTRODUCTION

EL 4562 covers 94 blocks, some 303 square kilometres over the main branches of the Wandie Creek and Fergusson River in the southwest corner of the Ranford Hill 1:100 000 map sheet.

Exploration is targeted at gold, base metals tin and associated minerals. The licence is situated 5km southwest from the highly prospective Wandie Gold Field, downstream Wandie Creek.

Enterprises, November 1987

Page 4

2 TENURE

EL 4562 was granted to Messrs Henry, Walker, Bailey and Wright on 23 September, 1986 for a period of six years.

This report represents the first annual report on the licence which covers an area of 303 square kilometres (Figure 1).

7

EXPLORATION LICENCE 4562 ANNUAL REPORT FOR FIRST YEAR

23 SEPTEMBER, 1986 TO 22 SEPTEMBER, 1987

for F. Henry, N. Walker, E. Bailey, and J. Wright by Eupene Exploration  
Enterprises, November 1987

Page 5

3 GEOLOGY

The detailed geology of the area is covered by the 1:100 000 Geological Map Series for RANFORD HILL by Bagas et al, 1986.

The southwest portion of RANFORD HILL consists of the Early Proterozoic, Burrell Creek Formation and the Cullen Granite Batholith.

Burrell Creek Formation

The Burrell Creek Formation of the Finnis River Group occurs in the eastern portion of the licence and is made up of grey brown phyllite, siltstone and feldspathic greywacke. Pebble conglomerate (volcanic) and banded green chloritic phyllite and siltstone occur in places.

The unit is regionally metamorphosed to greenschist facies and locally metamorphosed to amphibolite facies in contact with the Cullen Granite Batholith. Biotite, andalusite and cordierite hornfels are common accessory minerals near the Cullen Granite Batholith contact.

Cullen Granite Complex

In the licence area the Cullen Granite Batholith can be differentiated broadly into the Allamby Springs Granite, McCarthy's Granite and Driffield Granite.

The Allamby Springs Granite takes up half of the batholith in the licence area and consists of a variety of pink to green porphyritic hornblende-biotite granite, pink coarse porphyritic biotite leucogranite and pink coarse equigranular biotite leucogranite.

The McCarthy's Granite forms the central portion of the batholith in the licence and consists of similar granite and leucogranite to Allamby Springs Granite, as well as grey coarse porphyritic granite, fine to medium grey to pink equigranular leucogranite and fine to medium equigranular alkali feldspar granite.

The Driffield Granite forms the southern portion of the licence. It consists of a variety of coarse porphyritic pink hornblende-biotite

EXPLORATION LICENCE 4562 ANNUAL REPORT FOR FIRST YEAR

23 SEPTEMBER, 1986 TO 22 SEPTEMBER, 1987

for F. Henry, N. Walker, E. Bailey, and J. Wright by Eupene Exploration  
Enterprises, November 1987

Page 6

granite, grey coarse porphyritic biotite granite and coarse pink to grey equigranular and porphyritic leucogranite.

The Frances Creek Granite forms an isolated granite pod with the Bludells Monzonite within the McCarthy's Creek Granite. The Frances Creek Granite consists predominantly of pink to grey, fine to medium equigranular leucogranite and fine to medium, equigranular alkali feldspar granite. The Bludells Monzonite consists predominantly of grey to green medium equigranular biotite-hornblende-quartz monzonite and biotite-hornblende-quartz syenite.

Lineaments, quartz veins and shear zones are common throughout the Cullen Granite Batholith.

EXPLORATION LICENCE 4562 ANNUAL REPORT FOR FIRST YEAR

23 SEPTEMBER, 1986 TO 22 SEPTEMBER, 1987

for F. Henry, N. Walker, E. Bailey, and J. Wright by Eupene Exploration  
Enterprises, November 1987

Page 7

4 WORK COMPLETED AND EXPENDITURE

The first year of tenure field programme involved geological mapping and stream sediment sampling (Figure 2).

Once suitable sites were identified two stream sediment samples were taken; 5kg at 1 inch mesh size and 300g at 80 # mesh size.

The 106 samples were assayed for As, Cu, Pb, Zn, W and Sn and for bulk cyanide gold leach analyses.

Our clients also planned to undertake a detailed costean programme to identify suitable tin and tantalum deposits in the licence area. Due to the depressed nature of the tin market this programme was not carried out. This has resulted in a shortfall of some \$17,500.00 from the proposed expenditure of \$40,000.00 for the 1986/1987 period of tenure.

We regret the shortfall, however we did concentrate our efforts on identifying suitable gold and associated minerals with our stream sediment sampling programme.

The assay results for the stream sediment sampling programme are detailed in Appendix A.

The results are quite varied in value, however they are encouraging in part.

EXPLORATION LICENCE 4562 ANNUAL REPORT FOR FIRST YEAR

23 SEPTEMBER, 1986 TO 22 SEPTEMBER, 1987

for F. Henry, N. Walker, E. Bailey, and J. Wright by Eupene Exploration  
Enterprises, November 1987

Expenditure for Year One 1986/1987

|                                      |                    |
|--------------------------------------|--------------------|
| D6 Dozer Hire for Track Construction | \$5,000.00         |
| Vehicle Costs/Hire @ \$50.00 per day | 700.00             |
| Messing Charges @ \$20.00 per day    | 280.00             |
| Aerial Photograph Purchase           | 2,224.00           |
| Assay Analyses                       | 5,300.00           |
| Field Assistant @ \$200.00/day       | 2,800.00           |
| Prospector and Driver Wages          | 4,760.00           |
| Consulting Geologist @ \$300/day     | 900.00             |
| Drafting and Administrative Fees     | <u>614.00</u>      |
| TOTAL                                | <u>\$22,578.00</u> |

EXPLORATION LICENCE 4562 ANNUAL REPORT FOR FIRST YEAR

23 SEPTEMBER, 1986 TO 22 SEPTEMBER, 1987

for F. Henry, N. Walker, E. Bailey, and J. Wright by Eupene Exploration  
Enterprises, November 1987

Page 9

5 WORK PROPOSAL AND EXPENDITURE FOR 1987/1988

A detailed 40 mesh sized stream sediment sampling programme will be undertaken. Rock chip sampling will also take place to augment the stream sediment sampling.

Costeans will be dug in areas which show promise. If anomalous areas are identified, drilling may take place.

A minimum expenditure of \$15,000.00 will be spent on the licence during the second year of tenure.

If the tin prices continue to rise we will consider resurrecting the costean tin sampling programme we proposed for year one.
