RE: Partial Relinquishment over EL23569

Please accept this letter in lieu of a partial relinquishment report as no exploration work was conducted over the area as per outlined on the attached map. One hundred and seven (107) blocks will be relinquished as the attachment.

The target commodity over the term of exploration licence was gold, base metal and uranium. Due to the lack of regional magnetic anomalies, geological structures or any mineral occurrences, the area is believed not to host any significant mineralisation as most of the tenement is hosted by sand, gravel and laterite: colluvial, talus, transported terrestrial sediments, sandstones and limestone.

Analysis of these data sets, together with a comprehensive Open File Data literature search has enabled the tenement to be reduced in size.

Regards,
