PEKO MINES N.L.

PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek Locality for the Period 12/1/72 to 8/2/72

Geological mapping continued in the Thompkinson Creek beds.

D.D.H. 2 at the Explorer 80 prospect was drilled to 172m and is nearing completion. It intersected a narrow magnetic lode containing chalcocyprite but preliminary results indicate that the copper grade is much lower than in Hole 1.

Expenditure for the period is as follows:

PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek Locality for the Period 15/12/71 to 11/1/72

Geological mapping continued in the Thomkinson Creek beds in the northern part of the A.P. This work is progressing well with about 75 sq. miles now completed. No indications of mineralisation have been noted.

Mapping also continued in the Jubilee locality.

Expenditure for the period is as follows:

<table>

PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek Locality for the Period 17/11/71 to 14/12/71

Explorer 86, DDH 1, was stopped at 386.5 metres. No lode was intersected, the magnetic anomaly being due to disseminated magnetite in sediments.

The surface geological plan of Explorer 80 has been completed and drawn up.

Geological mapping of the Thompkinson Creek beds in the northern part of the A-P was commenced.

Work continued on the transfer of aeromagnetic contours to standard map sheets.

Grid extensions at Explorer 80 and North-West Orlando were completed.

Expenditure for the period was as follows:-

Diamond Drilling = $6,596.86
Payroll = $2,414.00
Administration Cost Distribution = $1,715.00
Unallocated Cost Distribution = $475.00

$11,200.86

PEKO MINES NO LIABILITY

PROGRESS REPORT

On Prospecting Authority No.2570 in the Tennant Creek locality
for the period 20/10/71 to 16/11/71

Geological mapping continued in the east Jubilee area.

Work was continued on the transfer of existing aeromagnetic results to
plans of the same scale as the geological sheets.

Prospect work was as follows:
Explorer 80 - Plane table mapping of the lode outcrop and surrounding
geology was completed over an area of about 40 acres, and the results
are being plotted up.
Explorer 89 - D.D.H. 1 was drilled ahead to 226m, through sediments.
Progress has been slow due to drilling difficulties.

Expenditure for the period is as follows:-

<table>

PEKO MINES N.L.

PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek Locality for the Period 22/9/71 to 19/10/71

Geological mapping continued in the area east and north-east of Jubilee.

The vehicle mounted reconnaissance magnetometer was used to run traverses over an area of ironstone outcrop west of the Explorer 13 prospect. Results have yet to be plotted.

Explorer 80 - DDH 1, intersected two narrow ironstone lodes at a vertical depth of about 100 metres. One contains significant copper mineralisation and follow-up drilling will be undertaken.

Explorer 86 - DDH 1, was commenced late in the period. Target depth of the hole is 370 metres.

Expenditure for the period is as follows:

BTW/KMC
PEKO MINES N.L.

PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek Locality for the Period 25/8/71 to 31/9/71

Geological mapping continued in the Explorer 14 - Orlando and Jubilee East areas.

Vehicle magnetometer work was continued in the area to the south-west of Quart Bowl and the three survey areas covered by traverses. Preliminary study of the results does not indicate any anomalies of interest. One aeromagnetic anomaly south-west of Orlando Mine was also covered. It similarly does not appear to be interesting.

Explorer 54, DDH 1, was completed at 381 metres. No lode was intersected, the magnetic anomaly being due to disseminated magnetite in sediments.

Explorer 80, DDH 1, was started during the month and had reached 108 metres.

Expenditure for the period is as follows:-

- Diamond Drilling - $6,329.50
- Payroll - $1,095.00
- Geophysical Surveys - $ 4.84
- Administration Cost - Distribution - $1,634.00
- Unallocated Cost - Distribution - $ 651.00

$9,714.34

19th October, 1971
BTW/RJR
PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek Locality for the Period 28/7/71 to 24/8/71

Geological mapping has been commenced in the Explorer 14 - South Orlando area.

Reconnaissance magnetic traverses have been run over areas near the Havelock and Whippet prospects and work is continuing in the area south of Explorer 44.

Explorer 1
Grid extensions have been completed to the west of the previous grid. Magnetics have yet to be read.

Explorer 54
DDH 1 has progressed to 248 metres. Fine-grained disseminated magnetite in the primary sediments indicates that the magnetic anomaly is probably due to disseminated magnetite rather than a massive lode. The hole is being drilled ahead to the target.

Expenditure for the period was as follows:

- Diamond Drilling $7,211
- Assay and Geochemical $128
- Leasing $135
- Payroll $1,253
- Geophysical Surveys $348
- Administration Cost Distribution $697
- Unallocated Cost Distribution $971

$15,172

TENNANT CREEK
21st September, 1971

B.T. WILLIAMS
Managing Geologist
Detailed geological mapping has continued in the Gecko Mine area.

Further westward extensions to the Explorer 1 grid were undertaken.

Explorer 85, DDH 1, was completed at a depth of 140.3 metres. A narrow lode zone was intersected but this contained no significant mineralisation.

A diamond drill rig is being set up on Explorer 54, DDH 1.

Expenditure for the period is as follows:

- Diamond Drilling: $2,021
- Payroll: $1,028
- Administration Cost - Distribution: $1,000
- Unallocated Cost - Distribution: $380

Total: $4,429

B.T. Williams
Managing Geologist

TENNANT CREEK
24th August, 1971
Diamond Drill Hole No. 3 at Explorer 1 Anomaly 4 advanced from 317 feet to 807 feet. Lode has not yet been intersected.

Explorer 22 Hole 1 was drilled from a precollared hole to a depth of 542 feet through quartz-feldspar porphyroid. No mineralisation has yet been encountered.

Geological mapping continued in the Gecko-Orlando area.

At Explorer 86 grid extensions have been completed and magnetics read.

Magnetics were read over grids at Olive Wood, Orlando north-west, the Explorer 80 area and extensions to the Explorer 74 grid.

Expenditure for the period is as follows:

BTM/VMH
12th June, 1971
DIAMOND DRILLING COMMENCED ON EXPLORER 1 ANOMALY 4 HOLE 3 FROM A HOLE PREVIOUSLY PREDRILLED TO 303 FEET. AT THE END OF THE PERIOD THE HOLE HAD REACHED 317 FEET.

GEOMORPHIC MAPPING CONTINUED IN THE GECKO-ORLANDO MINE AREA.

GROUND MAGNETIC SURVEYS WERE COMPLETED OVER GRIDS AT EXPLORER 86 (3 MILES SOUTH-EAST OF GECKO MINE), EXPLORER 12 EXTENSIONS, EXPLORER 80 EXTENSIONS, AND EXTENSIONS TO THE JUBILEE GRID. AT THE END OF THE PERIOD WORK WAS IN PROGRESS IN THE OLIVE WOOD PROSPECT LOCALITY.

PHYSICAL SURVEY WORK INCLUDED THE PEGGING OF A GRID OVER THE EXPLORER 87 PROSPECT, AND EXTENSIONS TO THE EXPLORERS 12, 85 AND 80 GRIDS.

EXPENDITURE FOR THE PERIOD IS AS FOLLOWS:

<table>

B. T. WILLIAMS
No drilling was undertaken during the month.

Detailed geological mapping was continued in the Gecko-Orlando area. This work is progressing well and a number of localities with promising geological structures have been defined.

Grid surveys and extensions to existing grids were completed at the following prospects:-
- Explorer 86 - 1 mile south-east of Gecko
- Olive Wood Prospect
- Explorer 74 - Warrego Mine area
- North-west extension to Orlando grid
- Explorer 56 - Ivanhoe area

Ground magnetometer surveys over these and other recent grid extensions are scheduled to commence in about two weeks.

Expenditure for the period is as follows:-

B.T. WILLIAMS

BTW/RJR
5th April, 1971
Drilling continued as follows:

Explorer 64 Hole 1 was completed at a depth of 538 feet after intersecting an epidote rich magnetite lode between 390 and 436 feet. The lode contained no ore mineralisation.

Explorer 1 Anomaly 6 Hole 2 was deepened with the hammer drill from 290 to 350 feet. Minor sulphides were noted. Samples were taken for assay.

Explorer 12 Hole 1 was predrilled to 180 feet, and casing seated prior to diamond drilling.

Geological mapping in the Great Western Syncline area was completed and a report produced.

Detailed mapping on a scale of 500 feet to an inch was commenced in the Gecko-Orlando locality.

Auger drilling for geochemical samples was carried out at the following prospects: Explorer 80, Explorer 71, Explorer 57, Explorer 74 and Explorer 54. A total of 1767 feet were drilled during the period.

Expenditure for the period is as follows:

<table>
<thead>

B. T. WILLIAMS.
ON PROSPECTING AUTHORITY NO. 2570 IN THE TENNANT CREEK LOCALITY FOR THE PERIOD 18/11/70 TO 15/12/70

Diamond drilling continued as follows:-

Explorer 65 Anomaly 2 Hole 1 was completed at a depth of 603 feet. Assays of the lode section showed minor copper but gold and bismuth content were negligible.

Explorer 64 Hole 1 encountered difficult drilling and advanced to only 400 feet.

Explorer 1 Anomaly 4 Hole 3 has been predrilled to a depth of 303 feet and casing seated.

Explorer 1 Anomaly 6 Hole 2 was drilled vertically to 293 feet with a hammer drill.

Geological mapping continued in the Great Western syncline area.

A grid has been pegged over the Explorer 85 anomaly and magnetics read.

Preliminary contour plans from the recent aeromagnetic survey have been received. A number of new magnetic anomalies have been indicated. Grids are being planned for these.

Expenditure for the period is as follows:-

<table>
<thead>
<tr>
<th>Expenditure</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assay and Geochemical</td>
<td>$352.30</td>
</tr>
<tr>
<td>Payroll</td>
<td>$80.00</td>
</tr>
<tr>
<td>Diamond Drilling</td>
<td>$4070.00</td>
</tr>
<tr>
<td>Overheads</td>
<td>$90.00</td>
</tr>
<tr>
<td></td>
<td>$4592.30</td>
</tr>
</tbody>
</table>
Diamond drilling continued as follows:

Explorer 1 Anomaly 5 Hole 1 was completed at a depth of 1460 feet. A narrow lode was intersected at 1370 feet. This contained minor copper as chalcocite.

One-oh-two Anomaly 2 Hole 1 was completed at 741 feet. The hole passed through a broad zone of weakly mineralised chloritic rock. Assays reveal no significant metal values.

Explorer 65 Anomaly 2 Hole 1 was commenced from the base of a precollared hole. It intersected broken siliceous lode material from 265 to 321 feet and is drilling ahead at 356 feet.

Explorer 64 Hole 1 was commenced from the base of a precollared hole and has advanced to 277 feet.

All detailed geological mapping completed on the AP has been transferred to controlled map sheets. Mapping has commenced in the Great Western syncline to the north-east of the Warrego mine. Photo enlargements to allow very detailed mapping in the Orlando-Gecko mine area have been ordered.

The magnetometer survey over the Queen of Sheba prospect has been completed and results are being analysed. A trial magnetic survey over an ironstone outcrop to the south-west of the Monument has revealed a significant anomaly. A grid will be pegged over the anomaly prior to a detailed magnetometer survey. The prospect has been designated as Explorer 85.
Grid extensions to cover a small anomaly on the south-east corner of the Explorer 80 grid have been completed.

A field trip to the No.12 Bore area in the north-eastern corner of the AP revealed that the high level aeromagnetic anomalies in the area showed no enhancement on the ground. No.12 Bore penetrated a considerable thickness of Cambrian dolomite before entering what appears to be quartzite of the Thompkinson Creek Beds. The magnetics are thus probably due to basic rocks within the quartzite sequence. No further work is planned for the area.

Expenditure for the period is as follows:

B.T. WILLIAMS
PEKO MINES NO LIABILITY

PROGRESS REPORT

ON PROSPECTING AUTHORITY NO. 2570 IN THE TENNANT CREEK LOCALITY

FOR THE PERIOD 23/9/70 TO 20/10/70

Diamond Drilling continued as follows:-

Explorer 1 Anomaly 3 Hole 7 Wedge Run 1 was completed at a depth of 1314 feet after intersecting a moderate width of high grade copper ore. This completed the surface testing programme on this prospect. Ore reserve calculations on the Anomaly 3 body have been completed and the reserves added to those of the Gecko Mine. Detailed ore blocking will be undertaken when the underground development work on Gecko Orebodies 1,2 and 3 has reached a stage to allow a drive to be taken to Anomaly 3. (now designated Orebody No. 4).

Explorer 1 Anomaly 5 Hole 1 drilled ahead to a depth of 1284 feet. Minor zones of mineralisation have been intersected.

One-Oh-Two Anomaly 2 Hole 1 reached a depth of 570 feet. To date the core is only weakly mineralised.

Geological mapping has continued in the Whippet-Barkley Highway locality, and previous mapping is being transferred from photos to controlled plan sheets. Transfer of the mapping in the Ivanhoe area to the sheets has been completed.

Some time has been spent on reconstruction of the survey in the Red Bluff area and most grids on the A.P. have had permanent markers cemented in on the base lines.

A magnetometer survey at the Queen of Sheba prospect is in progress.

Flying has been completed in the contract for low level aeromagnetics but no results have yet been received.
Expenditure for the period is as follows:

Assaying and Geochemical $ 904.
Payroll and Oncosts $ 1,707.
Field Supplies $ 10.
Geophysical Surveys $ 695.
Admin. Cost $ 1,421.
Unallocated Costs $ 399.
Diamond Drilling $ 16,720.

$ 20,956.
Diamond drilling continued as follows:

Explorer 1 Anomaly 3 Hole 7 intersected dolomite lode at a vertical depth of about 900 feet. No ore values were recorded. The hole was completed at 1412 feet. A branch hole to the east has been started.

Explorer 1 Anomaly 3 Hole 9 also intersected mainly dolomite lode. Mineralisation was minor and concentrated on the hanging wall of the dolomite body.

Explorer 1 Anomaly 4 Hole 2 intersected magnetite-hematite lode containing abundant pyrite but little copper. Hole 2 was completed at 672 feet. Further drilling on this body is planned in several months' time.

Explorer 1 Anomaly 5 Hole 1 advanced to 957 feet. Lode has not yet been intersected.

One-Oh-Two Anomaly 2 Hole 1 will commence within a few days. Target depth on this hole is 500 feet.

Geological mapping has continued in Whippet area and between Ivanhoe Mine and Black Angel. An auger drill has been used to define the granite contact north of Ivanhoe.

A grid has been completed over the Explorer 55 anomalies and ground magnetics read.

Magnetics have also been read over a small extension to the Explorer 72 grid.

The aeromagnetic survey over part of the A.P. is still in progress.

........2
Expenditure for the period is as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salaries, Wages &amp; Oncosts</td>
<td>$ 2,640.</td>

</tr>
<tr>
<td>Diamond Drilling</td>
<td>$23,250.</td>
</tr>
<tr>
<td></td>
<td><strong>$29,613.</strong></td>
</tr>
</tbody>
</table>
Diamond drilling continued as follows:-

Explorer 1 Anomaly 3 Hole 7 advanced from 500 feet to 700 feet in sediments.

Explorer 1 Anomaly 3 Hole 8 advanced from 366 feet to its final depth at 855 feet. Dolomite lode was intersected but it contained no significant mineralisation.

Explorer 1 Anomaly 3 Hole 9 made slow progress through very broken ground to 480 feet. The hole has not reached lode to date.

Explorer 1 Anomaly 4 Hole 1 was abandoned in lode at 419 feet after the contract drillers again got the core barrel stuck in the hole.

Explorer 1 Anomaly 4 Hole 2 was precollared to a depth of 250 feet with a Mayhew hammer drill. A diamond rig will commence on this hole in the near future.

Explorer 1 Anomaly 5 Hole 1 cut a new hole at 300 feet during barrel recovery operations. It advanced from this depth to 584 feet where it is again stopped due to stuck gear.

Detailed geological mapping has been completed in the Ivanhoe area and this is now being extended westward to the Black Angel area.

Mapping has also been completed in the Bernborough area. A block west of this is now being mapped.

Another phase in the geochemical sampling programme in the Explorer 1 area was completed. Results are not yet to hand.
A grid has been pegged over the Explorer 83 anomaly to the east of Explorer 72. Minor grid extensions on the Explorer 80 grid were completed.

Magnetics were completed over the Jubilee and Explorer 83 grids. Reading of the Queen of Sheba grid was commenced.

The low level aeromagnetic survey has finally commenced.

Expenditure for the period 1/7/70 to 25/8/70 (exclusive of drilling for period 1/7/70 to 28/7/70) is as follows:-

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salaries, Wages &amp; Oncosts</td>
<td>$4,583.</td>
</tr>

<td><strong>$26,220.</strong></td>
</tr>
</tbody>
</table>
At the Explorer 1 Anomaly 3 prospect diamond drill hole No. 4 was completed at 452 feet. Hole 5 on the same prospect intersected only dolomite lode and was completed at a depth of 1033 feet.

Hole 6 was completed during the period at a depth of 340 feet. It intersected a moderate width of secondary copper mineralisation.

Hole 7 was commenced during the period and has reached a depth of 500 feet in sedimentary rock.

Hole 8 was predrilled with a hammer drill to 360 feet and has advanced 6 feet beyond this with diamond drilling.

Hole 9 was predrilled to 350 feet and casing seated.

Explorer 1 Anomaly 4 Hole 1 recommenced using EXT gear and advanced to 417 feet in hematite lode. Copper mineralisation is minor to date.

Explorer 1 Anomaly 5 Hole 1 recommenced drilling and advanced to 404 feet when the gear was again stuck in the hole.

Explorer 1 Anomaly 6 Hole 1 was drilled to completion at 372 feet during the period. No lode was intersected.

Geological mapping was continued in the Bernborough-Three Ways area and was commenced in the area east of the Ivanhoe mine. Grid extensions and further magnetometer surveys are scheduled in the Explorer 80 area as a consequence of this mapping.

Grid survey work during the period included
(a) An easterly extension of the Explorer 72 base line and cross traverses over a magnetic anomaly.
(b) Further extensions of the Explorer 1 grid.
(c) Completion of the grid over the Explorer 76 anomaly.

Magnetometer survey continued on the Jubilee grid. Magnetics at Explorer 76 were completed and the Explorer 71 survey is in progress.

Auger drilling for geochemical samples was recommenced on the Explorer 1 grid.

Expenditure for the period is as follows:-

<table>
<thead>

</tr>
</tbody>
</table>

See report for period 29/7/70 to 25/8/70 for other expenses.
At the Explorer 1 Anomaly 3 prospect diamond drill hole No 4 drilled ahead to 336 feet in very oxidised and difficult ground. The hole intersected a narrow width of lode material with only minor copper values.

Hole 5 at this prospect advanced to 976 feet and is passing through dolomite lode material with minor copper values.

A rig is being shifted on to Hole 6 and a deeper Hole No 7 planned.

The first hole at the Explorer 1 Anomaly 4 prospect: moved ahead but at the end of the period was again stopped due to stuck gear. It intersected lode containing minor secondary copper at 357 feet and is stopped in lode at 386 feet.

Hole 1 at the Explorer 1 Anomaly 5 prospect has again shown no progress during the period due to stuck gear.

Detailed geological mapping continued south of the Bernborough prospect.

A grid has been surveyed in over the Explorer 71 anomaly in the Gecko-Orlando area. Magnetics will be read over this in the near future.

The initial gravity survey has now been completed at the Explorer 1 prospect. Some extension is now planned.

The magnetometer survey on the Jubilee grid is about half completed.

Expenditure for the period is as follows:

- Salaries wages and Oncoasts: $519
- Assaying: $466
- Geophysical: $373
- Unallocated Field Expenses: $10,645
- Administration: $394
- Diamond drilling: $12,485

Total: $24,882
PROGRESS REPORT

ON PROSPECTING AUTHORITY NO. 2570 IN THE TENNANT CREEK LOCALITY FOR

THE PERIOD 6.5.70 TO 2.6.70

At the Explorer 1 Anomaly 3 prospect, Hole 2 intersected a slightly narrower lode section than that in Hole 3. The ironstone part of this lode contained significant copper mineralisation in two sections separated by a barren zone. It was completed at a depth of 1070 feet.

Hole 4 at the same prospect encountered very bad drilling ground and had reached only 169 feet at the end of the period.

A new lode (Hole 5) had reached a depth of 230 feet by the period end.

Hole 6, a shallow hole, was pre-collared with a hammer drill to 220 feet and casing placed. This should avoid the bulk of the difficult ground encountered in Hole 4.

At Explorer 1 Anomaly 4, Hole 1 was advanced only 27 feet by contract drillers. Attempts are being made to recover broken rods.

A similar situation exists at Explorer 1 Anomaly 5 where the contract drillers have gear stuck in the hole at 244 feet.

Explorer 65 Hole 1 was completed at a depth of 605 feet. No further lode was intersected.

Results from the last phase of geochemical sampling in the Jubilee area were received. Two minor copper anomalies were indicated and follow up detailed sampling is planned.

Grid survey work during the period included the following: -

Completion of the Jubilee grid.
Re-establishment and levelling of a part of the Explorer 1 grid prior to gravity survey.
Correction of an error found in the Explorer 80 grid.
In geophysics, magnetics have been read over the Explorer 1 grid extensions, Explorer 74 extensions, Warrego extensions, Explorer 77 and extensions at Explorer 14.

A gravity survey is in progress in the Explorer 1 area.

Expenditure for the period is as follows:

The diamond drill hole Explorer 1 Anomaly 3 Hole 3 was completed at a depth of 1089 feet after intersecting a considerable width of copper mineralisation in a magnetite lode sheathed by dolomite lode.

Two further holes have been commenced on the prospect. At the end of the period these holes (Hole 2 and Hole 4) had reached depths of 310 feet and 92 feet respectively.

Diamond drill holes were also commenced at Explorer 1 Anomalies 4 and 5. Anomaly 4 Hole 1 had reached a depth of 137 feet at the end of the period in bedded sediments. Anomaly 5 Hole 1 is at 244 feet having cored 19 feet from the base of the precollared hole.

Explorer 65 Hole 1 advanced from 308 feet to 595 feet. It intersected a wide lode section consisting mostly of hematite. Mineralisation was minor except for a narrow high grade copper section at 410 feet. The hole is nearing completion.

Field mapping in the Gecko-Orlando area continued and mapping commenced around Explorer 65 and to the north-east around Bernborough.

Auger sampling on the Jubilee geochemical grid was completed with the drilling of a further 115 holes and samples dispatched for assay.

Grid survey continued in the Jubilee area.

A magnetometer survey on the western extensions of the Explorer 1 grid was commenced.
Expenditure for the period was as follows:

ON PROSPECTING AUTHORITY NO. 2570 in the TENNANT CREEK LOCALITY
for the PERIOD 11/3/70 to 7/4/70.

The wedge run in the diamond drill hole, Explorer 1 Anomaly 3
Hole 1 was terminated at 451 feet due to a new hole being cut from a
cave zone at 412 feet. This second branch continued through ironstone
and dolomite lode to 617 feet and the hole was completed at 645 feet.
The ironstone section of the lode again contained appreciable copper
principally as chalcocite.

A second hole on this prospect (Hole 3) has reached a depth of
631 feet after entering dolomite lode at 544 feet. Copper content has
not been high to date. This hole was precollared to a depth of 320
feet early in the period.

Drilling was commenced at Explorer 65 Hole 1 late in the period
and has advanced from the predrilled depth of 300 feet to 308 feet.

A hole was precollared at Explorer 1 Anomaly 5 Hole 1 to a depth
of 225 feet using a Mayhew 1000 hammer drill and casing seated.

Field mapping in the Orlando and Jubilee areas continued during
the period.

Further auger sampling was undertaken on the Explorer 1 grid around
Anomalies 3 and 4 and to the south-west Anomaly 1. The footage drilled
in 55 holes was 1320 feet.

Sampling recommenced on the Jubilee grid near the end of the
period. Six holes for 106 feet were drilled. The results of the previous
sampling were received and the values plotted. Several spot highs for
copper will be followed up.

Survey work included some minor grid extensions at Explorer 1 and
a continuation of the Jubilee grid extensions.

PROGRESS REPORT.

OUR PROSPECTING AUTHORITY No.2570 in the TENNANT CREEK LOCALITY
FOR THE PERIOD 1/2/70 to 10/3/70.

The diamond drill hole at Explorer 69 Hole 1 was completed at a depth of 1062 feet. No lode was intersected. The sediments contained considerable disseminated magnetite which probably gave rise to the magnetic anomaly.

At Explorer 1 Anomaly 3, Hole 1 entered a highly oxidised dolomite and ironstone lode containing appreciable copper at a depth of 415 feet. Core recovery to 465 feet was very poor and wedge was placed at 419 feet to re-cut this section. At the end of the period this branch has reached 451 feet and has confirmed the original copper values.

Geochemical sampling using the auger drill on the Jubilee grid was suspended after the completion of 146 hole so that further sampling could be undertaken in the Explorer 1 area. Footage drilled at Jubilee for the period was 1700 feet.

The geochemical sampling programme was extended to get greater coverage over Anomaly 3 and to do a preliminary study of Anomaly 4. A total of 126 holes for an aggregate footage of 2470 feet of drilling was completed.

Detailed field mapping in the Orlando area was continued.

Reconstruction of the Explorer 14 grid and some minor extensions were completed as were the extensions to the Explorer 74 grid. Extensions on the Jubilee grid are in progress.

A hammer drill was used to precollar a diamond drill hole on the Explorer 65 prospect and casing was seated in the hole.

Expenditure for the period 14/1/70 to 10/3/70 are continued on page 2.

PROGRESS REPORT

On Prospecting Authority No. 2570 in the Tennant Creek locality

for the month of January, 1970

Details below include work on A.P.'s 1847, 2039, 2200, 2215, 2240, 2266, 2267 and 2264 for the first half of the month.

Diamond drilling was continued at the Explorer 69 and Explorer 1 Anomaly 3 prospects. At Explorer 69 Hole 2 progressed to a depth of 790 feet by the end of the month. The hole passed through porphyroid to 400 feet and continued through bedded sediments.

Hole 1 at Explorer 1 Anomaly 3 was recommenced late in the month and progressed slowly through highly oxidised and broken ground to a depth of 330 feet at the end of the month.

In the Jubilee area the planned grid lay-out has been completed and geochemical sampling using an auger drill has been commenced. This work is being supervised by a newly appointed graduate who has familiarised himself with the previous geological mapping and will complete this.

Plane table mapping of the Queen of Sheba prospect has now been completed and plans are being drawn up. Geochemical results from the programme completed at the prospect have not yet been received.

The grid at the Explorer 1 prospect has been extended for approximately a mile westward. Ground magnetics will be read on this when the geophysical team returns from Sydney.

Minor grid extensions have been completed in the Explorer 12 area.

Grid extensions at the Explorer 30 and Warrego grids have also been completed.

Expenditure for the period 17/12/69 to 13/1/70 is as follows:

The application for Peko Mines, consisting of 884 square miles, has been approved for a period of twelve months to 15-1-71. It is located on the Tennant Creek, and the minerals are gold.

The description of the land is as follows:

A piece or parcel of land in the Northern Territory of Australia containing an area of 884 square miles more or less, the boundaries of which are described as follows:

Commencing at the intersection of latitude 19 degrees 00 minutes 00 seconds with longitude 134 degrees 25 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 25 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 23 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 23 minutes 10 seconds with longitude 134 degrees 23 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 23 minutes 10 seconds with longitude 134 degrees 27 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 27 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 27 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 00 seconds with longitude 134 degrees 28 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 00 seconds with longitude 134 degrees 30 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 29 minutes 00 seconds with longitude 134 degrees 30 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 00 seconds with longitude 134 degrees 30 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 00 seconds with longitude 134 degrees 30 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 30 seconds with longitude 134 degrees 07 minutes 10 seconds thence proceeding to the intersection of latitude 19 degrees 30 minutes 30 seconds with longitude 134 degrees 07 minutes 10 seconds thence proceeding to the intersection of latitude 19 degrees 30 minutes 30 seconds with longitude 134 degrees 07 minutes 10 seconds.
ALL such place or parcel of land in the Northern Territory of Australia containing an area of 7,500 square miles or less, the boundaries of which are described as follows:

Commencing at the intersection of latitude 19 degrees 00 minutes 00 seconds with longitude 134 degrees 25 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 25 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 23 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 23 minutes 10 seconds with longitude 134 degrees 23 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 23 minutes 10 seconds with longitude 134 degrees 27 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 19 minutes 30 seconds with longitude 134 degrees 27 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 00 seconds with longitude 134 degrees 28 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 00 seconds with longitude 134 degrees 30 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 29 minutes 00 seconds with longitude 134 degrees 30 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 29 minutes 00 seconds with longitude 134 degrees 10 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 30 seconds with longitude 134 degrees 10 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 27 minutes 30 seconds with longitude 134 degrees 07 minutes 18 seconds thence proceeding to the intersection of latitude 19 degrees 26 minutes 36 seconds with longitude 134 degrees 07 minutes 18 seconds thence proceeding to the intersection of latitude 19 degrees 26 minutes 36 seconds with longitude 134 degrees 06 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 26 minutes 00 seconds with longitude 134 degrees 06 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 28 minutes 00 seconds with longitude 134 degrees 03 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 30 minutes 00 seconds with longitude 134 degrees 03 minutes 00 seconds thence proceeding to the intersection of latitude 19 degrees 30 minutes 00 seconds with longitude 134 degrees 57 minutes 00 seconds thence proceeding thence.
According to the intersection of latitude 19 degrees 31 minutes 00 seconds with longitude 133 degrees 31 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 31 minutes 00 seconds with longitude 134 degrees 00 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 32 minutes 00 seconds with longitude 134 degrees 00 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 32 minutes 00 seconds with longitude 134 degrees 07 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 34 minutes 20 seconds with longitude 134 degrees 07 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 33 minutes 30 seconds with longitude 134 degrees 03 minutes 40 seconds then proceeding to the intersection of latitude 19 degrees 34 minutes 40 seconds with longitude 134 degrees 03 minutes 20 seconds then proceeding to the intersection of latitude 19 degrees 35 minutes 50 seconds with longitude 134 degrees 07 minutes 40 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 30 seconds with longitude 134 degrees 07 minutes 40 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 30 seconds with longitude 134 degrees 07 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 30 seconds with longitude 134 degrees 07 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 30 seconds with longitude 134 degrees 06 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 00 seconds with longitude 134 degrees 05 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 40 minutes 00 seconds with longitude 133 degrees 59 minutes 40 seconds then proceeding to the intersection of latitude 19 degrees 41 minutes 00 seconds with longitude 133 degrees 59 minutes 40 seconds then proceeding to the intersection of latitude 19 degrees 40 minutes 00 seconds with longitude 133 degrees 50 minutes 00 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 40 seconds with longitude 133 degrees 50 minutes 40 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 40 seconds with longitude 133 degrees 55 minutes 30 seconds then proceeding to the intersection of latitude 19 degrees 36 minutes 00 seconds with longitude 133 degrees 57 minutes 40 seconds then
proceeding to the intersection of latitude 19 degrees 33 minutes 00 seconds with longitude 132 degrees 50 minutes 20 seconds thence
proceeding to the intersection of latitude 19 degrees 33 minutes 00 seconds with longitude 133 degrees 00 minutes 20 seconds thence
