1. SUMMARY

This is the Final Report for EL26123 located in the Barrow Creek region.

Matilda applied for this EL on the grounds that the region is prospective for uranium. Since its grant, Matilda has been attempting to farm-out the EL but has been unsuccessful. This along with the October 2008 world financial crisis has resulted in Matilda surrendering the EL.

No on-ground exploration or any ground disturbing work of any nature was carried out during the term of the EL by Matilda Minerals Limited or its agents.

2. INTRODUCTION

Matilda Minerals Ltd ("Matilda") was admitted to the Australian Stock Exchange on 15 September 2004. Matilda owns and operates the Andranangoo mineral sand mine on Melville Island in the Northern Territory. The mine started production in November 2006 and produces a heavy mineral concentrate comprising approximately 50% zircon, 25% rutile + other valuable heavy minerals for export directly to China. Until recently Matilda has specialised in mineral sands exploration and development using state-of-the-art exploration and production techniques. Matilda's mineral sand interests are on the Tiwi Islands, the Top End of Northern Territory, Cape York in Queensland, Broome in Western Australia, and Narrabri in New South Wales. Matilda started to diversify its portfolio with the search for other commodities in Northern Territory and Western Australia and applied for a number of ELs prospective for uranium.

The EL is located approximately 210km south-west of Tennant Creek, 270km north-north-west of Alice Springs on, and 60km north-west of Barrow Creek (see figures 1 and 2).

The EL was granted on 19th February 2008 and comprises 58 blocks, an area of approximately 185.5 sq km.

The EL encroaches on the following pastoral leases:

- Stirling – NT portion 655

The exploration rationale for EL26123 is based on its location in northern Arunta Basin, an area of high prospectivity for a number of minerals including uranium.

4. GEOLOGY

EL26123 is located in the northern Arunta Basin, an area with favourable geology for uranium mineralisation.

Common name	Aileron Province (Arunta Region)
Type	Metamorphic and Igneous
Lithology	Variably metamorphosed clastic sediments, meta volcanic rock, calc-silicate rocks, dolerite, mafic rock, granite.
StratAgeMin	Palaeoproterozoic
StratAgeMax	Mesoproterozoic
AgeMin	1560My
AgeMax	1860My
Summary	Forms part of the Arunta region. A poly-deformed and metamorphosed east- west trending basement terrain along the southern margin of the North Australian Craton
Relationship	Unconformably overlain by the Central Australian Platform Cover. Largely faulted relationship with the Warumpi Province (formerly Southern Arunta Province) and Irindina Province
Thickness	Unknown, possibly several tens of kilometres
Economic	Hosts a variety of commodities including Cu, Pb, Zn, Au, W, Sn, Zr, mica, vermiculite, REE, and alluvial garnets.
Metamorphism	Lower greenschist to granulite

5. EXPLORATION

No on-ground exploration or any ground disturbing work of any nature was carried out during the term of EL26123 by Matilda Minerals Limited or its agents.

This EL was granted in February 2008 and for the past 10 months Matilda has attempted to farm-out the tenement but, despite some interest from several companies, was unable to secure a deal. Exploration was planned to commence during the 2008 dry season, however due to the on-going discussions with potential joint venture partners this did not happen.
