

- LEGEND**
- Inferred, late, non-magnetic intrusive or alteration
 - Inferred granitic intrusive at depth or large scale alteration. Packardville Microgranite equivalent?
 - Reversely magnetised volcanics, intrusion or alteration
 - Undifferentiated Gold Creek Volcanics ± Wollongbar Formation. Non to weakly magnetic phase.
 - Weakly magnetic units / phase within the Gold Creek Volcanics
 - Moderately to strongly magnetic units / phase within the Gold Creek Volcanics. May include magnetite altered sections.
 - Undifferentiated eastern domain non magnetic Wollongbar Formation ± Gold Creek Volcanics.
 - Weak - moderate uranium anomalies
 - Moderate - strong uranium anomalies
 - Inferred major fault or fracture zone. Hatching indicates inferred dip direction.
 - Down thrown side of fault
 - Inferred minor fault or fracture zone
 - Inferred fold axes (antiformal or synformal)
 - Inferred fracture or alteration zone
 - Unconformity
 - Inferred magnetic contact
 - Magnetic trend or minor magnetic unit. Stratigraphy or drainage
 - Strike slip
 - Tenements
 - Targets, areas of exploration interest
