1. SUMMARY

EL 28782 is about 4km just north side of the Barkly Highway. Tropical Resources Pty Ltd applied for EL28782 primarily to explore for Gold, Diamond and secondly to evaluate the potential for other types of economic mineralization such as Iron and Phosphate. Work during Year 1 of tenure consisted of a review of NTGS data and Open File Company reports (geological and geophysical), and a short fieldtrip.

Work during Year 2 included field reconnaissance and data evaluation. Tropical Resources Pty Ltd believe there is no potential for Gold, Diamond or other minerals with EL 28781 and therefore has surrendered the title.

2. LOCATION AND ACCESS

EL 28782 is about 1100Km of SSE141° of Darwin, and about 300km of NEE95° of Tennant Creek, just 4km of north side of the Barkly Highway (Figure 1). The southern boundary of the License runs just 4km nearly parallel with the Barkly Highway. Access is along the Barkly Highway via Stuart Highway from Darwin. There are several rough road can be reach to the Lease. Topography is plains with some hills but the relative elevation is less 50m, several rivers cross the land. Access is advisable in the dry season only. The Ranken village is located on the southeast corner; it can be a stop site during the field work.

The tenement has numerous creeks which can flood in heavy rains during the wet season.

3. TENEMENT STATUS AND OWNERSHIP

EL 28782 was granted on 21th December 2011 and expires on 20th December 2017 for a term of six years. It comprises 86 graticular blocks (269.44 sq km). There are no other mining leases or mineral claims shown within the Licence boundaries.

Underlying cadastre is mainly Perpetual Pastoral Lease. Landholder is below: NT Portion 4, Pastoral Lease 916; Ranken) (Figure 2).

4. GEOLOGY

EL28782 is situated within the Georgina Basin, a wildly folded sequence of Cambrian rocks. The 1:250,000 Geological map covers the tenement area (Ranken, 2005) (Figure 3).

Figure 3 Geological Map of EL 28782 from 1:250000 geologic map of Ranken
All of the economic diamond deposits and other significantly diamondiferous occurrences in Australia occur on the North Australian Craton (“NAC”). The NAC underlies the Kimberley region of northern WA, the northern two thirds of the NT and the north western part of Queensland. It is also host to many significant base metal, gold and uranium deposits. The NAC was formed at about 1850Ma during the Barramundi Orogeny by the amalgamation of Archaean and early Proterozoic rocks which now form the basement rocks to the younger sequence. Proterozoic (1820-1600Ma) platform cover sediments, Palaeozoic volcanics and sediments, and Mesozoic sediments cover these basement rocks.

The Georgina Basin is one such platform cover which developed above the NAC between 1800-1500Ma. Its sedimentary package consists of unmetamorphosed and less intensely deformed rocks of carbonate, siliciclastic and interbedded volcanics deposited in a shallow intracratonic basin.

The Georgina Basin is overlain by the remnants of the Cambrian Barkly Group Ranken Formation Limestone: Bioclast, bioclast rudestone. Grey Biological Dolomite, rudestone, Sandstone. There is a widespread distribution of Cenozoic sandy soil, laterite and alluvium cover.

5. PREVIOUS EXPLORATION

Exploration has been carried out in the area since 1985 but just only one company worked on this area (shown in Table 1), Exploration primarily involved rock chip, soil and stream sampling for gold and some base metal analysis.

6. EXPLORATION DURING YEAR 1

In 2012, Tropical Resources exploration consisted of historic data compilation including tenure, datasets, open file reports and geo-referencing of relevant maps. This enabled an informed review of the tenements prospectively in regards to Diamond and Gold, Iron and Phosphate. Field reconnaissance was also completed.

7. EXPLORATION DURING YEAR 2

Working program for Year 2 included:

a) Short field reconnaissance
b) All data study and review
c) Ground Geological survey

8. EXPENDITURE

Expenditure during all of two years is $55,000

9. CONCLUSION AND RECOMMENDATION

The exploration target is Diamond, Gold, Base metals, Iron, and Phosphate. However, after analysis of historical exploration data and superficial traversing of EL28781, Tropical Resources Pty Ltd believe there is no potential for Gold, Diamond or others minerals with EL 28781 and therefore has surrendered the title.
