

JOHNNY'S CREEK NO. 1

CORE DESCRIPTIONS

Core No. 1: 514' - 536' recovered 2'

Coring Times: 1, 1, 10, 2, 1, 1, 1, 4, 5, 12, 1, 1, 8, 2,  
10, 1, 6, 1, 8, 1, 2, 1 mins./ft.

Pale buff to light grey, medium to coarse quartz sandstone. Mostly siliceous, clean, compact, dense but locally weathered to buff or rust coloured ferruginous, friable rock whereby the ferruginous matrix tends to be partly removed, causing pitting and vugs.

Bedding is massive but occasionally fine laminae are present which often give way to current bedding.

Dip of strata 2°.

No petroleum indications.
