

EL 24609
PROPOSED WORK PROGRAM, YEAR 2

EL 24609 forms part of Minemaker's Wonarah Project and the Project's principal field programme will be in the southern portion of EL 9976 where outcropping phosphate at the Arruwurra Prospect needs to be drilled out to determine whether there is an outcropping/near-surface phosphate deposit of similar size and tenor to that outlined in EL's 22168 and 9976. As part of this work, Minemakers proposes to undertake a first-pass drilling program within EL 24609 so as to augment the database as a necessary first step to determine whether detailed infill drilling should subsequently be carried out.

Proposed expenditure

Whilst approximately \$200,000 is budget estimate for the 2007 "Wonarah Project" Stage 1 drill program, it is anticipated that an expenditure of \$20,000 will be incurred during Year 2 on EL 24609
