## **Introduction**

A detail GPS gravity survey designated as King River Gravity Survey (as part of Arnhem Land Gravity Survey) has been carried out in an area approximately 65 kilometers North-North-West of Nabarlek in the Northern Territory. The survey ran over 26 days from 21<sup>st</sup> June 2010 to 16<sup>th</sup> July 2010 on behalf of Cameco Australia Pty. Ltd.

The proposed King River gravity survey consisted of 568 detail gravity stations in an irregular grid comprising 18 North-South trending lines coincident with GDA94 with a line spacing of 50/100 meters and station intervals of 50 metres. The lines were bounded in the west by GDA94 Zone 53 298650E, in the east by 299850E, in the south by 8700000N and in the north by 8702000N. The line lengths ranged from 1000m to 2000m.

During the Survey an extra 158 stations in 17 Lines at a 25m line spacing and a 25m station spacing were proposed in the central section of the original proposed survey grid.

The completed King River gravity survey comprised of 703 stations in 26 lines. 23 gravity stations were omitted due to terrain, vegetation or landholders etc. Note; some of the stations may have been slightly offset from their planned position due to vegetation and terrain.

There were 36 observations repeated for quality control purposes, giving a repeat percentage of 5.1%.

The Bouguer anomaly processing has been performed using a country rock density of 2.67 g/cc.

Figure 1 below shows the location of the survey area.

**Figure 1. Location Diagram**

### **GPS Survey and Gravity Datum**

Horizontal Datum: Geocentric Datum of Australia 1994 (GDA94)  
Map Grid of Australia 1994 (MGA94)  
Zone 53

Vertical Datum: Australian Height Datum (AHD)

Gravity Datum: Isogal 1984 / IGSN 71

## **Survey and Gravity Base Stations**

One base station was established in the survey area. It was placed on a hill central to the project to provide good UHF radio coverage for the RTK system. The base is designated as Base 2010.2202. The actual base is marked with a short star picket driven flush with the natural surface. The base is witnessed by a long star picket within 0.3m of the ground mark standing about 1m tall. An aluminum tag is attached with the inscription "Haines Surveys" "GPS & Gravity Base 2010.1002"

A Sub-base was located within 5 minutes drive of the main base to provide a backup base station to the main base in case loop ties to the main base were poor.

## **Survey Control**

Horizontal and vertical control for Base 2010.2202 has been established using the AUSPOS online GPS processing service provided by Geoscience Australia. This method provides control within the GDA94 Datum to within +/- 5 cm. It largely replaces the need for finding local survey marks or allows accurate control to be established when local marks are not available.

A total of 18 hours (at 15 second intervals) of observations were logged over 3 days. The following outlines the Cartesian coordinate precision attained per day.

1 Sigma	sX(m)	sY(m)	sZ(m)	yyyy/mm/dd
2202	-0.044	0.021	-0.002	2010/06/21
2202	0.008	0.008	0.004	2010/06/22
2202	0.008	0.008	0.004	2010/06/23

Since GDA94 and WGS84 (Global Positioning System Datum) are virtually equivalent the GDA94 values can be directly input into the GPS processing software for all calculations.

Vertical control has been converted to an Australian Height Datum (AHD) height using the GDA94 height determined from AUSPOS and the AUSGEOID98 gravimetric geoid.

## **Gravity Control**

Gravity control for 2010.2202 base station was established on the Australian Fundamental Gravity Network (Isogal 1984 / IGSN 71) using classical A-B-A ties from gravity station 2010.2201 (HAINES SURVEYS BASE). The values for 2010.2201 were attained through A-B-A ties from gravity station 2009.1401 (EXSISTING HAINES SURVEYS BASE). A-B-A ties were made over several days to within 0.01 milligals

## **Survey & Gravity Control Values**

Control information (WGS84 heights have been derived using AusGeoid98):

Station	GDA94 (WGS84)			GDA94 Zone 55		AHD	Isogal84
	Latitude	Longitude	Height	Easting	Northing	Height	Gravity mgal
2009.1401	-12 18 25.43910	133 19 14.25730	131.645	317370.582	8638920.57	74.924	978275.872
2010.2201	-12 20 43.12110	133 16 49.40050	140.38	313020.684	8634661.988	83.764	978279.897
2010.2202	-11 44 38.90810	133 09 30.42870	96.732	299311.824	8701081.857	39.113	978275.171
2010.2203	-12 19 31.74981	133 25 51.57243	136.736	329387.401	8636955.574	80.001	978270.327

## **GPS Observations and Processing**

Carrier phase GPS data has been collected using *Trimble 4000* series geodetic receivers.

Measurements for detail gravity observations have been made using Real Time Kinematic (RTK) techniques giving horizontal and vertical precision of at least 5 cm. Where radio link was not possible measurements for post processed observations have been made using Static techniques with baselines processed to double difference fixed solutions resulting in horizontal and vertical precision of approximately 2 cm.

Static baseline processing has been done using Trimble GPSurvey Version 2.35 software and RTK processing using Trimble Geomatics Office Version 1.01 software.

## **Gravity Observations**

Gravity measurements have been made using *Scintrex CG5 Autograv* instruments. The instrument number 080340352 was used in this project.

Readings of 120 seconds were taken at base station. Readings of 40 seconds were taken at all other gravity survey points.

Base station readings were taken at the beginning of the day and at the end of the day's fieldwork.

The CG5 instrument applies an instrument drift correction to its final gravity reading. Any residual drifts between base station readings are corrected by the gravity post processing software. The instrument also applies Earth Tide Correction to its final gravity reading at each station. The instrument calibration constants are contained in the daily gravity data files.

## **Point Numbering and Marking**

An 8 digit point number is used to identify each gravity station. The first 4 digits indicate the line number. The second 4 digits indicate the station number

The lines are South-North and the 8 digits are constructed from the planned MGA coordinates for each gravity station using

$$\text{Line No} = (\text{MGA E} - 299000) / 10 \qquad \text{Stn No} = (\text{MGA N} - 8701000)$$

eg. Planned gravity station MGA coordinates

299000.000N

8701000.000E

Line No = 9900

Station No = 1000

I e, Pt No = 99001000

The gravity stations have not been marked in the field.

## **Gravity Processing**

The gravity values for this survey are related to the *Australian Gravity Base Station Network* using the *Isogal84 (IGSN 71)* values at known Gravity Stations as provided by *DMR*.

***Note that all gravity values shown in these surveys are expressed in units of milligals.***

The field gravity observations have been processed using standard formulae and constants to produce a Bouguer Anomaly for each gravity station.

The meter reading as recorded in the raw Scintrex data file is corrected for instrument tilts, meter drift and Earth Tide. Post processing corrections are detailed below.

### **Drift**

The residual drift between base station readings is calculated for each station reading proportionately by time. This is the drift value shown in the processing output.

$$\text{Drift} = [ (t_1 - t_n) ((b_2 - b_1) / (t_2 - t_1)) ]$$

$t_n$  = time of meter reading at each station

$b_1$  = base meter reading prior to station reading

$t_1$  = time of base reading  $b_1$

$b_2$  = base meter reading after station reading

$t_2$  = time of base reading  $b_2$

Obs mgal

This is the observed gravity value in milligals.

$$\text{Obs} = b_g + (r_n - \text{drift}) - b_1$$

$b_g$  = base stn gravity value (Isogal84)

$r_n$  = meter reading at each station as shown in the CG3 .dat file

drift = residual drift correction as shown above

$b_1$  = base meter reading prior to station reading

Anom

This is the difference between the observed gravity and the theoretical gravity value at each station. The theoretical value is calculated using the *1967 International Gravity Formula*.

$$\text{Anom} = \text{Obs} - g_{th}$$

Obs = observed gravity as explained above

$$g_{th} = 978031.8 (1 + 0.0053024 \sin^2 \phi - 0.0000059 \sin^2 2\phi)$$

$\phi$  = WGS84 Latitude

Freeair corrn

The freeair correction is calculated using

$$\text{Freeair corrn} = 0.3086 H$$

H = height above sea level (AHD height)

Bouguer corrn

$$\text{Bouguer corrn} = -0.04191 \rho H$$

$\rho$  = density (2.67 g/cc used for this survey)

H = height above sea level (AHD height)

Bouguer Anom

$$\text{Bouguer Anom} = \text{Anom} + \text{Freeair corrn} + \text{Bouguer corrn}$$

## **Results Formats**

Printed results of the gravity processing (with Bouguer corrections at density 2.67 g/cc) are included in the Appendix of this report. The results are also supplied in digital form on Compact Disc with the following of files being supplied in a separate sub directory call Processed Data.

ALLCSV.CSV                      REPEATS.REP                      LINE#.BMP

Field gravity observation files with the extension .DAT and .DC and summarised GPS baseline solution files with extension .GPS are also supplied in a separate subdirectory named Raw Data.

A digital copy of this report is also on the compact disc in the root Directory

### **ALLCSV.CSV Format**

This is a Comma Separated Variable format file. This format facilitates data import into spreadsheet and database software. Each record (line) contains the following data fields:

Pt Number, Line No, Station No, Date, Day Number, Local Time, WGS Latitude, WGS Longitude, WGS Height, MGA East, MGA North, AHD Height, Meter reading, Meter reading standard deviation, Earth Tide Correction, drift correction, corrected meter reading, gravity difference (mgal) from base, observed gravity (mgals), gravity anomaly, free-air correction, Bouguer correction (2.67), Bouguer anomaly

### **\*.DAT**

These are the raw data files from the *Scintrex CG3* gravimeter. There is a separate file for each day's data for each field party. The files are identified by the Julian day number (001 = Jan 1st) with the prefix G. eg. G142 = day 142 (21st May).

### **\*.DC**

These are the GPS Real Time Kinematic Data Collector files. They are ASCII format files containing the GPS vectors from the base station. The data is structured in a Trimble format (DC file Version 4).

### **\*.BMP**

These are line profile files. They are bitmaps of Elevation/Bouguer comparisons of line profiles.
