## Introduction

A detailed GPS gravity survey designated as Lake Lewis Gravity Survey has been carried out in an area approximately 15km South West of Tilmouth Roadhouse, Northern Territory on Lake Lewis. The survey was completed over the course of 8 days between the 22<sup>nd</sup> and 29<sup>th</sup> of August 2019 on behalf of Salt Lake Potash.

The proposed Lake Lewis Gravity Survey consisted of 527 stations on 21 south west to north east trending traverses. All proposed traverses are coincident with GDA94. Traverse intervals were not previously uniform but were approx. 1100 metres and station intervals were 200 metres. The lines were bounded in the west by GDA94 Zone 53 2298140E, in the east by 250011E, in the south by 7455550N and in the north by 7474400N.

The completed Lake Lewis Gravity Survey consisted of all 527 proposed station locations. Some stations have been offset from their planned position along the traverses to avoid taking readings on small islands within the salt lake.

There were 32 observations repeated for quality control purposes, giving a repeat percentage of 6.0%.

The Bouguer anomaly processing has been performed using a country rock density of 2.67 g/cc.

## Lake Lewis Gravity Survey Location Diagram (map is oriented to the North)

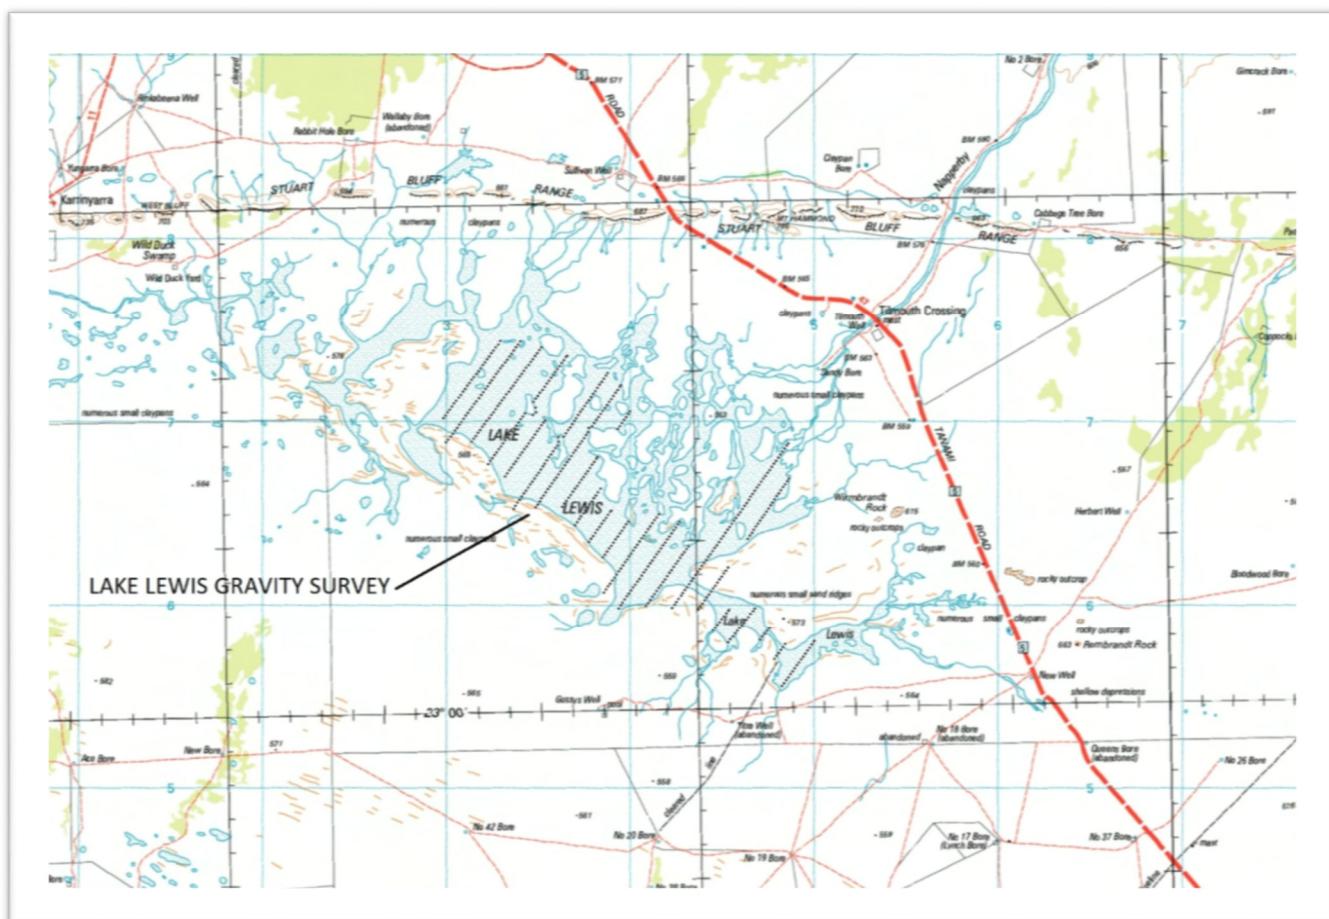

Figure 1 – Lake Lewis Gravity Survey

## **Survey and Gravity Base Stations**

A GPS/Gravity base station, designated as 2019.0901 was established within the proposed survey grid. The base station was established in a convenient location within the project area to provide good UHF radio coverage for the RTK system. The actual base is marked with a short star iron picket driven flush with the natural surface. The base is witnessed by a long star picket within 0.3m of the ground mark standing about 1m tall. Aluminium tags are attached with the inscription "Haines Surveys" "Gravity Base" "2019.0901".

A sub-base designated 2019.0999 was located within 10 minutes drive of the main base to provide a backup base station in case loop ties to the main base were poor. These positions are not marked in the field.

Horizontal and vertical control for 2019.0901 was established using the AUSPOS online GPS processing service provided by Geoscience Australia. This method provides control within the GDA94 Datum to within +/- 5 cm. It largely replaces the need for finding local survey marks or allows accurate control to be established when local marks are not available.

A total of 24 hours (at 5 second intervals) of observations were logged over 3 days for base 2019.0901. The following outlines the Cartesian coordinate precision attained per day.

1 Sigma	sX(m)	sY(m)	sZ(m)	yyyy/mm/dd
0901	0.012	0.012	0.015	2019/08/22
0901	0.010	0.011	0.013	2019/08/23
0901	0.011	0.010	0.011	2019/08/24

Since GDA94 and WGS84 (Global Positioning System Datum) are virtually equivalent the GDA94 values can be directly input into the GPS processing software for all calculations.

Vertical control has been converted to an Australian Height Datum (AHD) height using the GDA94 height determined from AUSPOS and the AUSGEOID09 gravimetric geoid.

Gravity control for base station 2019.0901 was established on the Australian Fundamental Gravity Network (AAGD07) using 4 of A-B ties from known AFGN station 1991910335 (Alice Springs Airport Isogal).

All completed gravity ties ensured that gravity control was established to within 0.010.

Coordinates for all bases are listed in the table below.

<b>Lake Lewis Survey/Gravity Control</b>							
<b>Station</b>	<b>WGS84/GDA94</b>			<b>MGA94 Zone 53</b>		<b>AHD</b>	<b>AAGD07</b>

## **GPS Survey and Gravity Datum**

Horizontal Datum: Geocentric Datum of Australia1994 (GDA94)  
Map Grid of Australia 1994 (MGA94)  
Zone 53

Vertical Datum: Australian Height Datum (AHD)

Gravity Datum: AAGD07

## **GPS Observations and Processing**

Carrier phase GPS data has been collected using *Trimble R8 GNSS* series geodetic receivers.

Measurements to existing control have been made using Static techniques. All static baselines have been processed to double difference fixed solutions resulting in horizontal and vertical precision of approximately 2 cm.

Measurements for detail gravity observations have been made using Real Time Kinematic (RTK) techniques giving horizontal and vertical precision of at least 5 cm.

Static baseline processing and RTK processing has been done using Trimble Business Center Version 2.5 software.

Details of Horizontal and Vertical control are given in the sections above.

## **Gravity Observations**

Gravity measurements have been made using a *Scintrex CG5 Autograv* instruments numbered 14938.

Readings of 120 seconds were taken at all base stations. Readings of 40 seconds were taken at all other gravity survey points. Base station readings were taken at the beginning of the day and at the end of the day's fieldwork.

All Autograv instruments apply an instrument drift correction to their final gravity readings. Any residual drifts between opening and closing base station readings are corrected by the gravity post processing software. The instruments also apply Earth Tide Corrections to their final gravity reading at each station. The various instrument calibration constants are contained in the daily gravity data files.

**Point Numbering and Marking**

For the gravity survey, an 8 digit point number is used to identify each gravity station. The first 4 digits indicate the line number. The second 4 digits indicate the station number.

For the south west – north east traverse (lines), on MGA94, the 8 digits are constructed arbitrarily.

For the line numbers the most north westerly traverse/line was assigned a line number of 5000 and for each subsequent line to the south east 20 was added. i.e. line numbers 5000, 5020, 5040 etc

For the station numbers the most north easterly station on each traverse/line was assigned a line number of 4000 and for each subsequent station along the traverse to the south west 20 was added. i.e. line numbers 4000, 4020, 4040 etc

Line No = 5000              Station No = 4000

That is, Point No = 50004000

Station numbers have not been expanded in the processed data

The gravity stations have not been marked in the field.

## **Gravity Processing**

The gravity values for this survey are related to the *Australian National Gravity Database* using the *Australian Absolute Gravity Datum 2007 (AAGD07)* values at known Gravity Stations as provided by *Geoscience Australia*.

***Note that all gravity values shown in these surveys are expressed in units of milligals.***

The field gravity observations have been processed using standard formulae and constants as documented by *Geoscience Australia* to produce a Bouguer Anomaly for each gravity station.

The meter reading as recorded in the raw Scintrex data file is corrected for instrument tilts, meter drift and Earth Tide. Post processing corrections are detailed below.

Reference:

*V\_GRAV\_JETSTREAM\_AAGD07\_final\_REVISED\_NOV\_2008.pdf*

### **Drift**

The residual drift between base station readings is calculated for each station reading proportionately by time. This is the drift value shown in the processing output.

$$\text{Drift} = \left[ \left( t_n - t_1 \right) \left( (b_2 - b_1) / (t_2 - t_1) \right) \right]$$

$t_n$  = time of meter reading at each station

$b_1$  = base meter reading prior to station reading

$t_1$  = time of base reading  $b_1$

$b_2$  = base meter reading after station reading

$t_2$  = time of base reading  $b_2$

### **Observed Gravity**

This is the observed gravity value in milligals.

$$\text{Obs\_g} = b_g + (r_n - \text{drift}) - b_1$$

$b_g$  = base stn gravity value (AAGD07)

$r_n$  = meter reading at each station as shown in the gravity meter log file

drift = residual drift correction as shown above

$b_1$  = base meter reading prior to station reading

Atmospheric Correction

$$\text{Atmos} = 8.74 - (0.00099 * h) + (0.0000000356 * h^2) / 10$$

$h$  = height above ellipsoid

Anomaly

This is the difference between the observed gravity and the theoretical gravity value at each station. The theoretical value is calculated using the *1980 International Gravity Formula (Moritz, 1980)*.

$$g_{\text{th}} = 978032.67715 (1 + 0.001931851353(\sin f))^2 / \sqrt{(1 - 0.0066943800229(\sin f))^2}$$

$f$  = GDA94 Latitude

$$\text{Anom} = \text{Obs}_g - g_{\text{th}} - \text{Atmos}$$

$\text{Obs}$  = observed gravity as explained above

Free Air Correction

The freeair correction is calculated using

$$\text{Freeair} = (3.087691 - 0.004398 \sin^2 f) * h - 7.2125 * 10^{-7} h^2 / 10$$

$h$  = height above ellipsoid

Bouguer Correction

This uses the closed form equation for the gravity effect of a spherical cap of radius 166.7 km based on a spherical Earth with a mean radius of 6,371.0087714 km, height relative to the ellipsoid.

$$\text{Bouguer} = -(2 \pi G r ((1 + \mu) * h - \lambda R)) / 10$$

where

$\pi$  is pi

$G$  is the gravitational constant

=  $6.67428 \times 10^{-11} \text{ m}^3 \text{kg}^{-1} \text{s}^{-2}$  (Mohr and Taylor 2001);

$r$  = density (2.67 g/cc used for this survey)

$h$  is the ellipsoid height in metres of the station

$R$  = ( $R_o + h$ ) the radius of the earth at the station

$R_o$  is the mean radius of the earth = 6,371.0087714 km

GRS 80 value from Moritz or 6,371 km (LaFehr)

$\mu$  &  $\lambda$  are dimensionless coefficients with following definitions

$$\mu = ((1/3) * \eta^2 - \eta)$$

where  $\eta = h/R$

$$\lambda = (1/3) \{ (d + f\delta + \delta^2)[(f - \delta)^2 + k]^{1/2} + p + m * \ln(n/(f - \delta + [(f - \delta)^2 + k]^{1/2})) \}$$

where:

$$d = 3 * \cos^2 \alpha - 2$$

$$f = \cos \alpha$$

$$k = \sin^2 \alpha$$

$$p = -6 * \cos^2 \alpha \sin(\alpha/2) + 4 * \sin^3(\alpha/2)$$

$$\delta = R_o/R$$

$$m = -3 * \sin^2 \alpha \cos \alpha = -3 * k * f$$

$$n = 2 * [\sin(\alpha/2) - \sin^2(\alpha/2)]$$

$$\alpha = S/R_o$$

$$S = \text{Bullard B Surface radius} = 166.735 \text{ km.}$$

Bouguer Anomaly

Bouguer Anomaly = Anomaly + Freeair + Bouguer  
Geoidal Bouguer Anomaly

Free Air Anomalies and Bouguer Anomalies are also provided using geoid heights and an infinite slab Bouguer correction. They are designated as Geoidal Free Air Anomaly and Geoidal Bouguer Anomaly respectively.

These anomalies are calculated with the formulae in use prior to 5 February 2008 when the AAGD07 gravity datum was implemented. These formulae are:

Theoretical gravity based on the 1967 international gravity formula:

$$G_{th} = 978031.8456 * (1 + 0.005278895 \sin^2\varphi + 0.000023462 \sin^4\varphi)$$

$$\text{Geoidal FreeAir} = ((3.08768 - 0.00440 \sin^2\varphi) * H - 0.000001442 * H^2) / 10$$

$$G_{\text{FreeAirAnom}} = \text{Obs}_g - G_{th} + \text{Geoidal FreeAir}$$

$$\text{Geoidal Bouguer} = -0.04191 * H * r$$

f = GDA94 Latitude

H = Geoid Height (ground elevation)

r = density (2.67 g/cc used for this survey)

$$\text{Geoidal Bouguer Anomaly} = G_{\text{Obs}} - G_{th} + \text{Geoidal FreeAir} + \text{Geoidal Bouguer}$$

**NOTE:** The Geoidal Free Air and Geoidal Bouguer Anomalies calculated using geoid heights and the infinite slab model will NOT be the same as those obtained prior to 5 February 2008. The data are now referenced to the new gravity datum AAGD07. Data prior to 5 February 2008 were in the ISOGAL84 gravity datum.

To convert observed gravity values from ISOGAL84 to AAGD07, the following formula can be used:

$$g(\text{AAGD07}) = g(\text{ISOGAL84}) - 0.078 \text{ mGal}$$

## Results Formats

Results of the gravity processing (with Bouguer corrections at density 2.67 g/cc) are included in the Appendix of this report. They are not printed with the hard copy version.

The results are also supplied in digital form on CD within the file 1909\_Lake\_Lewis.csv.

### CSV Format

This is a Comma Separated Variable format file. This format facilitates data import into spreadsheet and database software. Each record (line) contains the following data fields:

"Pt#"	Station identifiers used in data loggers, line and station numbers combined
"Line"	Station line number
"Stn"	Station number
"Date"	Date of observation
"Day"	GPS day number
"Time"	Time of observation
"GDA94_Lat"	WGS84/GDA94 Latitude used in GPS observation
"GDA94_Long"	WGS84/GDA94 Longitude used in GPS observation
"GDA94_Ht"	Height above the ellipsoid defined by the WGS84 Datum
"MGA94(ZONE53)E"	Easting value for observation on the MGA94/GDA94 Datum
"MGA94(ZONE53)N"	Northing value for observation on the MGA94/GDA94 Datum
"AHD_Ht"	Height of observation in the Australian Height Datum
"Meter_Ser_No"	Gravity meter serial number
"Meter_Rdg"	Gravity meter observation value in mGals
"Meter_Error"	Measurement of the quality of the gravity observation (a function of the SD of the observation set used and the duration of the set)
"ETC"	Earth Tide Correction applied to the gravity observation
"Drift"	The component of the meter drift between opening and closing gravity base observations applied to the observation
"Corr_Meter"	The meter observation with the drift applied
"dg"	The difference in gravity between the base and the observation
"Obs_g"	Observed gravity of the station
"Anom"	Difference between observed and theoretical gravity
"Freeair"	Free air correction (see above)
"Bouguer(2.67)"	Bouguer correction using a density of 2.67g/cc (see above)
"Bouguer_Anom"	Bouguer anomaly (see above)

Field gravity observation files with the extension .DAT and .job are also supplied in a folder named *Raw Data*.

### \*.DAT

These are the raw data files from the *Scintrex CG5* gravity meter. There is a separate file for each day's data. The files are identified by the Julian day number (001 = Jan 1st) with the prefix G. eg. G030 = day 030 (30th January).

### \*.JOB

These are the GPS Real Time Kinematic Data Collector files. They are ASCII format files containing the GPS vectors from the base station. The data is structured in a Trimble format (job file Version 7).
