

Warramunga Province mineral deposit series: Gecko corridor 3D compilation and deposit atlas

Title:	Warramunga Province mineral deposit series: Northern Star 3D compilation and deposit atlas
Custodian:	Northern Territory Geological Survey (NTGS), Department of Industry, Tourism and Trade.
Abstract:	<p>The Tennant Creek mineral field is located in the Warramunga Province, central Northern Territory. The Tennant Creek mineral field has a long history and exploration for and production from ironstone-hosted Cu–Au (–Co) mineralisation. The Gecko Corridor hosts a series of copper-dominated deposits including Goanna and Monitor.</p> <p>The WH Bryan Mining and Geology Research Centre, Sustainable Minerals Institute, University of Queensland compiled all open-file geoscience data for the Northern Star deposit cluster and produced a 3D compilation in Geoscience Analyst with source data and accompanying deposit atlases.</p> <p>The 3D compilation can be viewed using Geoscience Analyst software, which is a free viewer and can be downloaded from the following location: https://mirageoscience.com/mining-industry-software/geoscience-analyst/. In addition, the raw imported data has been provided for import to other software platforms.</p>

The Territory and the University of Queensland give no warranty or assurances as to the accuracy of the information contained in the publication and accepts no direct or indirect liability for reliance on its content, including liability for negligence and for any loss, damage, injury, expense or cost incurred by any person directly or indirectly as a result of accessing, using or relying on any of the content of this publication to the maximum extent permitted by law.

Lineage:

Data compiled from both open file company exploration reports and NTGS projects in the Warramunga Province area of interest. Company exploration data is extracted from legacy hardcopy reports by scanning and digitising, including spatial data capture from maps where necessary. Legacy data capture has been completed at various times and usually on a geological terrain basis. More recent exploration reports and data are supplied in digital formats. Original reports and data can be downloaded via GEMIS (geoscience.nt.gov.au/gemis).

Positional Accuracy:

Input datasets are of varying age and quality.

Attribute Accuracy:

Geological observations and descriptive attributes noted by resource/mapping geologists.

Logical Consistency:

Data is logically consistent for the purposes of geological interpretation.

Completeness:

The data is complete within the scope of this project
