

Technical Reporting

Tenure: EL27820

Group Report ID: N/A

Title: Annual Technical Report for EL27820

Report Period: 29 July 2017 to 28 July 2018

Project Name: Little Mary

Title Holder: Anthony Wright

Title Operator: Anthony Wright

Personal Author: Anthony Wright

Report Type: Annual

Date of compilation: 24th May 2018 (early)

250K Mapsheet/s: Mt Evelyn SD5305

100K Mapsheet/s: Ranford Hill 5370

Geological Province: Pine Creek Orogen

Stratigraphic Name:

Target Commodity: Cu/Au

Other Commodities: Fe

Purpose for which Titles are held: Exploration

Title history:

Location, physiography and access: Little Mary River

Geology Setting:

Exploration/Mining History: See previous reports

Exploration Rationale: I believe there is potential for Cu/Au mineralisation on the lease

Work Completed: This is my annual report on EL27820 (Bat Wire). EL27820 is only about 4km² in size, with only one full block; the other seven blocks are partial blocks, yet the rent is over \$200 per block (\$2010 all up this year). As soon as the rain stops and the ground has dried, D and S Excavations will be contacted to tidy up the Cornet Hill Tracks (10-12km), then turn off onto a track to the target area at the top of the lease, through the gate and across to the Little Mary, then back around the inside of the fence. This will give Terra Search (Townville – to do a ground

mag survey) access to the target area without wasting time getting there. It is very hard going, steep hills and steep creek crossings, easier to walk the ground than to drive. This ground mag survey will give the drillers (May Drilling) the exact spot to drill, as well as the right angle and direction to drill. At this point in time only three RC holes are planned, then if something is hit I plan to change to diamond drilling (NQ followed by HQ) to maximise the information gained from the core.

During the year I prospected and took stream sediment samples and rock chip samples; however I don't have the coordinates and the samples were not assayed. They were taken in the north-east of the lease.

Results:

Conclusions/Recommendations:

Drilling required to further the project
