MUD COMMENTS															OPERATIONAL COMMENTS																																		
Treating mud with 1 ppb Cleanrol HD to tighten API fluid loss. Adding caustic soda to increase pH. Mud check #2 is active pit and contains heavy slug.															Continue to circulate while maintaining mud weight at 11.6 ppg. Trip out of hole wet for two stands. Circulate to trouble shooting MWD tools, fail. Wash and ream out from 2635 to 2400 m. Flow check, well static. Pump slug 40 bbls of 14.5 ppg mud. Trip out hole to surface, hole slick. No issues POOH. Slip and cut drill line. Make up lateral BHA. RIH. Wash & Rream from 2535 - 2664 mMD. Drill ahead 8-1/2" hole.
